Roof-mounted Antenna Relocation Kit

Models Affected: 2013 and later E-Series, Transit
2013 – 2019 F-Series Super Duty

Description: Satellite radio is offered as an option on E-Series, F-Super Duty and Transit vehicles. The production SDARS antenna is mounted on the vehicle cab roof.

Upfitter-installed equipment, such as aero fairings and cab-over cargo boxes, can significantly interfere with reception of the satellite radio antenna. In such cases the antenna may need to be relocated to a clear-sky location. A service kit has been released to facilitate relocation of the satellite radio antenna.

Service Kit Part Number: JC3Z - 18813 – A

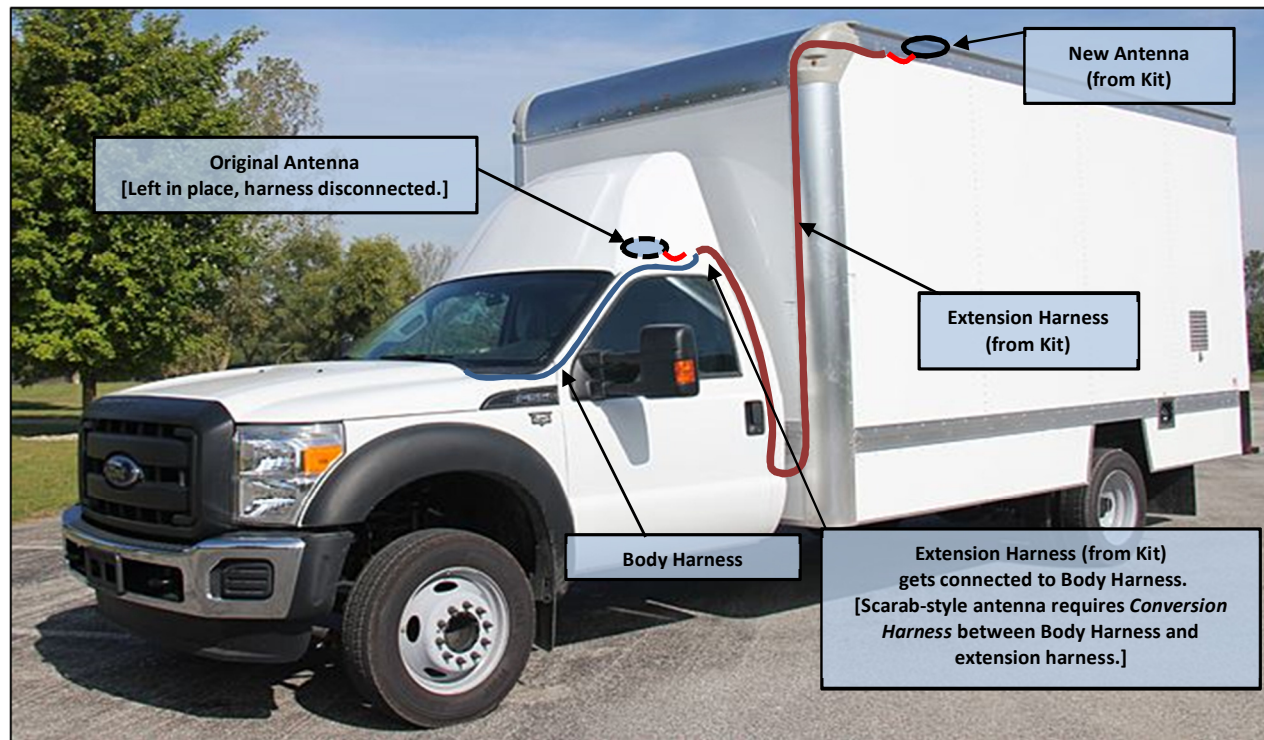

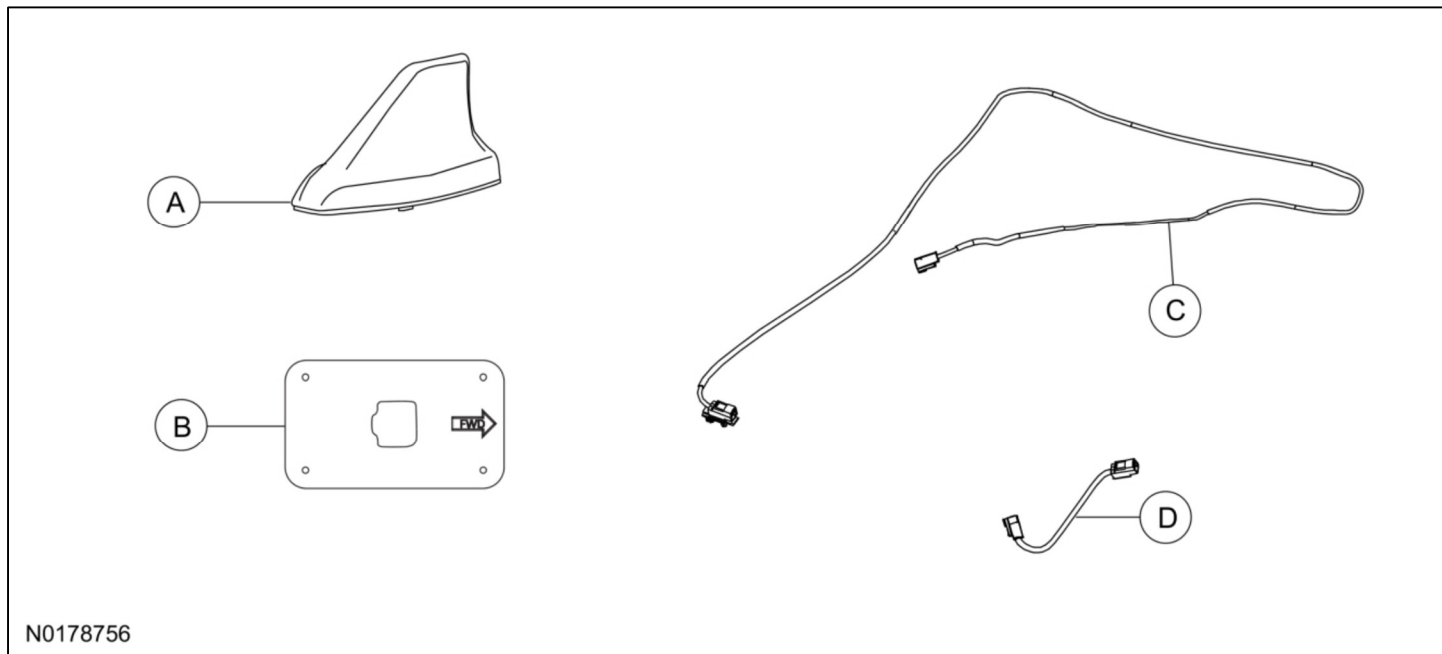

Figure 1: Example of antenna relocation kit installation

The service kit provides the following items needed to mount a new satellite antenna in a location that is unobstructed by aftermarket equipment.

The service kit contains:

Item	Description
A	Replacement Shark-fin Antenna
B	Antenna Grounding Plate Extension Harness - 22 ft. (6.7 M)
C	Extension Harness - 22 ft. (6.7 M)
D	Conversion Harness - 1 ft. (305 mm)
Not shown	Installation Guide

Antenna mounting information is provided in the kit's Installation Guide.
