SUPER DUTY F-SERIES
WHAT'S NEW

- Neutral Idle technology added to F-350 thru F-600 Chassis Cab vehicles
- Updated Mobile Mode Guidance- Resistor must be installed in circuit for maximum rpm limit
- Customer configurable SEIC ramp rates using FDRS tool
- Updated Fuel Filler pipe installation reference
- Added California Green House Gas Emission (CGH) reference
- Added Center of Gravity reference information
- Added wheelbase modification guidelines for Electronic Stability Control (ESC)
- Updated tail lamp configurations and FDRS tool requirements

Important Notices

The information described herein is believed to be correct at the time of publication, but accuracy cannot be guaranteed. Ford reserves the right to discontinue models or change specifications or designs at any time without notice and without incurring any obligation. Representations regarding the compliance of any Ford manufactured incomplete vehicle to any rule, regulation or standard issued pursuant to the National Traffic and Motor Vehicle Safety Act or the Canadian Motor Vehicle Safety Act are set forth only in the Incomplete Vehicle Manual (IVM) which accompanies each incomplete vehicle.

Regulations such as those issued by the Federal Highway Administration (FHA) or issued pursuant to the Occupational Safety and Health Act (OSHA), and/or state, provincial, and local laws and regulations may require installation of additional equipment for the particular use intended for the vehicle. It is the responsibility of the subsequent stage manufacturer or completed vehicle alterer and the vehicle purchaser to ascertain how the vehicle will ultimately be used, if FHA, OSHA or state provincial or local regulations apply and how the vehicle as completed will comply with those requirements. Nothing contained herein is to be construed as a representation that such equipment required for the particular use intended has been installed on the completed or incomplete vehicle.

Reference Information

Ford Body Builder Advisory Service Publications

This document is an example of a program-specific Body Builders Layout Book (BBLB) published by the Ford Body Builder Advisory Service (BBAS) team. Each Ford Commercial Truck vehicle line has a similar document that aims to provide detailed information which may be of interest to a subsequent-stage manufacturer or alterer. The Ford Transit and Transit Connect also have a Body and Equipment Mounting Manual (BEMM), which is a comprehensive resource dedicated to body and equipment mounting information.

Yet another source of program-specific information are the “Vehicle Specification” documents available on the Ford BBAS website. Information typically found in these documents are: vehicle curb and accessory weights, vehicle dimensions, component descriptions, capacities, GAWRs, alternator output, powertrain output and gear ratios.

In addition to the program-specific documents, there are several Ford BBLB documents that contain general best practices or information on specific subjects that span multiple vehicle lines. These include:

• General BBLB - contains Definitions, Design Recommendations and Vehicle Storage Guidelines.
• Snow Plow BBLB
• Pickup Box Removal BBLB

These publications are updated every model year and can be accessed via the web at https://fordbbas.com under “Publications”. For BBLB and BEMM documents, expand the “Body Builder Layout Book” Section to view all available documents. For Vehicle Specifications, expand the “Vehicle Specifications” section. The website search function can be used to filter for specific content or vehicle line.

Ford Body Builder Advisory Service Bulletins

Occasionally, the Ford BBAS team will create an SVE “Bulletin” to address a specific issue or distribute important information in a timely manner. These documents can be accessed via the web at https://fordbbas.com under “Bulletins”. The website search function can be used to filter for specific content or vehicle line.

If applicable, information from each SVE bulletin will be incorporated into the appropriate BBLB document the following model year. In some cases, SVE bulletins will continue to be referenced in this document.

Ford Body Builder Advisory Service Contact

The Ford Truck Body Builder Advisory Service may be consulted if questions regarding the completion of Ford commercial vehicles are not adequately addressed in the documentation described above. For assistance call (877) 840-4338 or e-mail via the web at https://fordbbas.com under “Contact Us”. Please be as specific as possible with the request details to assure the most accurate and timely response.

Ford Service Publications

Ford Service Technical Resources (including wiring diagrams, repair manuals and diagnostic tool support) are available by subscription via the Motorcraft website: www.motorcraftservice.com

The following publications are examples of digital and printed manuals which are available from Helm Incorporated; call 1-800-782-4356 or contact Helm, Inc. at their website www.helminc.com:

- Ford Truck Shop Manuals
- Ford Towing Manuals
- Ford Wiring Diagrams

SUPER DUTY F-SERIES
MODEL LINEUP
F-250 STYLESIDE PICKUP / PICKUP BOX DELETE (1) (Cont'd)

(1) Pickup box delete available with Regular Cab 141.6" WB, SuperCab 164.2" WB and Crew Cab 176.0" WB models with 6.2L or 6.7L engines only. Base Curb Weights shown above are for completed pickup truck models with standard equipment and the engine/transmission combination indicated. To adjust the "Base Curb Weight" to reflect Pickup Box Delete, add 20 lbs. for SRW models and 22 lbs. for DRW models to the "Front" weight and subtract 366 lbs. for SRW models and 417 lbs. for DRW models from the "Total" weight (adjust the "Rear" weight by subtracting "Front" from "Total"). This provides the weight effect of deleting the pickup box, rear step bumper and standard spare tire, wheel and carrier. Please also refer to footnote 3.
(2) Load rating represents maximum allowable weight of people, cargo and body equipment and is reduced by optional equipment weight.
(3) OPT/ARC Weight is the maximum allowable weight for regular production options (OPT) and aftermarket equipment (Accessory Reserve Capacity) for completed pickup truck models with standard equipment and the powertrain combination indicated. To adjust the OPT/ARC weights to reflect Pickup Box Delete, add 366 lbs. for SRW models and 417 lbs. for DRW models. Please also refer to footnote 1.
(4) Gross Axle Weight Rating is determined by the rated capacity of the minimum component of the axle system (axle, computer-selected springs, wheels, tires) of a specific vehicle. Front and rear GAWRs will, in all cases, sum to a number equal to or greater than the GVWR for the particular vehicle. Maximum loaded vehicle (including passengers, equipment and payload) cannot exceed the GVW rating or GAWR (front or rear).

NOTE: The standard front spring/GAWR on Pickup models is computer-selected based on the total front weight of options ordered. Front spring/GAWR upgrades range from 3800 lbs. to 5250 lbs. (4x2) and 4000 lbs. to 6000 lbs. (4x4). Certain option packages include the following front spring/GAWR upgrades: Heavy-Service Front Suspension Package and Heavy-Service Package For Pickup Box Delete — Front springs/GAWR will be selected 1 upgrade higher than standard computer selection; Camper Package — Front springs/GAWR will be selected 2 upgrades higher than standard computer selection on 4x2 models and 1 upgrade higher than standard computer selection on 4x4 models; Snowplow Package — Front springs/GAWR is assigned or specifically selected as shown in the chart above. Front spring/GAWR upgrade is not included if the maximum front spring has been computer-selected as a consequence of options ordered.

Weight Unit: Pounds

SUPER DUTY F-SERIES
MODEL LINEUP
F-350 SRW STYLESIDE PICKUP / PICKUP BOX-DELETE[1] W/17” TIRES (OVER 10k)

1) Pickup box delete available with Regular Cab 141.6" WB, SuperCab 164.2" WB and Crew Cab 176.0" WB models with 6.2L or 6.7L engines only. Base Curb Weights shown above are for completed pickup truck models with standard equipment and the engine/transmission combination indicated. To adjust the “Base Curb Weight” to reflect Pickup Box Delete, add 20 lbs. for SRW models and 22 lbs. for DRW models to the “Front” weight and subtract 366 lbs. for SRW models and 417 lbs. for DRW models from the “Total” weight (adjust the “Rear” weight by subtracting “Front” from “Total”). This provides the weight effect of deleting the pickup box, rear step bumper and standard spare tire, wheel and carrier. Please also refer to footnote 3.
2) Load rating represents maximum allowable weight of people, cargo and body equipment and is reduced by optional equipment weight.
3) OPT/ARC Weight is the maximum allowable weight for regular production options (OPT) and aftermarket equipment (Accessory Reserve Capacity) for completed pickup truck models with standard equipment and the powertrain combination indicated. To adjust the OPT/ARC weights to reflect Pickup Box Delete, add 366 lbs. for SRW models and 417 lbs. for DRW models. Please also refer to footnote 1.
4) Gross Axle Weight Rating (GAWR) is determined by the rated capacity of the minimum component of the axle system (axle, computer-selected springs, wheels, tires) of a specific vehicle. Front and rear GAWRs will, in all cases, sum to a number equal to or greater than the GVWR for the particular vehicle. Maximum loaded vehicle (including passengers, equipment and payload) cannot exceed the GVW rating or GAW R (front or rear).

NOTE: The standard front spring/GAWR on Pickup models is computer-selected based on the total front weight of options ordered. Front spring/GAWR upgrades range from 3800 lbs. to 5250 lbs. (4x2) and 4400 lbs. to 6000 lbs. (4x4). Certain option packages include the following front spring/GAWR upgrades: Heavy Service Front Suspension Package and Heavy Service Package For Pickup Box Delete — Front springs/GAWR will be selected 1 upgrade higher than standard computer selection; Camper Package — Front springs/GAWR will be selected 2 upgrades higher than standard computer selection on 4x2 models and 1 upgrade higher than standard computer selection on 4x4 models; Snowplow Package — Front springs/GAWR is assigned or specifically selected as shown in the chart above. Front spring/GAWR upgrade is not included if the maximum front spring has been computer-selected as a consequence of options ordered.

Weight Unit: Pounds

1) Pickup box delete available with Regular Cab 141.6" WB, SuperCab 164.2" WB and Crew Cab 176.0" WB models with 6.2L or 6.7L engines only. Base Curb Weights shown above are for completed pickup truck models with standard equipment and the engine/transmission combination indicated. To adjust the "Base Curb Weight" to reflect Pickup Box Delete, add 20 lbs. for SRW models and 22 lbs. for DRW models to the "Front" weight and subtract 366 lbs. for SRW models and 417 lbs. for DRW models from the "Total" weight (adjust the "Rear" weight by subtracting "Front" from "Total"). This provides the weight effect of deleting the pickup box, rear step bumper and standard spare tire, wheel and carrier. Please also refer to footnote 3.

2) Load rating represents maximum allowable weight of people, cargo and body equipment and is reduced by optional equipment weight.

3) OPT/ARC Weight is the maximum allowable weight for regular production options (OPT) and aftermarket equipment (Accessory Reserve Capacity) for completed pickup truck models with standard equipment and the powertrain combination indicated. To adjust the OPT/ARC weights to reflect Pickup Box Delete, add 366 lbs. for SRW models and 417 lbs. for DRW models. Please also refer to footnote 1.

4) Gross Axle Weight Rating (GAWR) is determined by the rated capacity of the minimum component of the axle system (axle, computer-selected springs, wheels, tires) of a specific vehicle. Front and rear GAWRs will, in all cases, sum to a number equal to or greater than the GVWR for the particular vehicle. Maximum loaded vehicle (including passengers, equipment and payload) cannot exceed the GVW rating or GAWR (front or rear).

NOTE: The standard front spring/GAWR on Pickup models is computer-selected based on the total front weight of options ordered. Front spring/GAWR upgrades range from 3800 lbs. to 5250 lbs. (4x2) and 4400 lbs. to 6000 lbs. (4x4). Certain option packages include the following front spring/GAWR upgrades: Heavy Service Front Suspension Package and Heavy Service Package For Pickup Box Delete — Front springs/GAWR will be selected 1 upgrade higher than standard computer selection; Camper Package — Front springs/GAWR will be selected 2 upgrades higher than standard computer selection on 4x2 models and 1 upgrade higher than standard computer selection on 4x4 models; Snowplow Package — Front springs/GAWR is assigned or specifically selected as shown in the chart above. Front spring/GAWR upgrade is not included if the maximum front spring has been computer-selected as a consequence of options ordered.

(1) -The Height Data shown represents dimensions of a base/standard vehicle with no options. F and R Height dimensions are measured from ground to bottom of frame rail. LH dimension is measured from ground to top of frame rail. Actual height may vary due to production tolerances [completed vehicles only].
(2) - Height at Base Curb Weight with standard springs.
(3) - Loaded Height at spring rating with standard springs.
(4) - FW for F350 DRW with Aluminum rim = 1766mm [69.5in] (4x2) and 1767mm [69.6in] (4x4). FW for F450/F550 DRW with Aluminum rim = 1916mm [75.4in].
(5) - AA is maximum grown width at maximum tire pressure and load.
(6) - CW is DRW Rear Track width measured at rim mating flange surface.

(A) F450/F550 RC 60CA with 42.2" Aft Axle Frame Extension.
(B) F550 RC 84CA with 32.4" Aft Axle Frame Extension.
(C) K (SRW) = 180mm [7.1in] for 6.7L Diesel, 165mm [6.5in] for 6.2L Gas.

SRW – Single Rear Wheels
DRW – Dual Rear Wheels

*H - Top of frame at C/L of rear axle to top of tire in jounce.
*L - From outside edge of shackle eyebolt
*W - Outside of frame to top of tire in jounce.

(1) -The Height Data shown represents dimensions of a base/standard vehicle with no options. F and R Height dimensions are measured from ground to bottom of frame rail. LH dimension is measured from ground to top of frame rail. Actual height may vary due to production tolerances [completed vehicles only].
(2) - Height at Base Curb Weight with standard springs.
(3) - Loaded Height at spring rating with standard springs.
(4) - FW for F350 DRW with Aluminum rim = 1766mm [69.5in] (4x2) and 1767mm [69.6in] (4x4). FW for F450/F550 DRW with Aluminum rim = 1916mm [75.4in].
(5) - AA is maximum grown width at maximum tire pressure and load.
(6) - CW is DRW Rear Track width measured at rim mating flange surface.

(A) F450/F550 RC 60CA with 42.2" Aft Axle Frame Extension.
(B) F550 RC 84CA with 32.4" Aft Axle Frame Extension.
(C) K (SRW) = 180mm [7.1in] for 6.7L Diesel, 165mm [6.5in] for 6.2L Gas.

SRW – Single Rear Wheels
DRW – Dual Rear Wheels

*H - Top of frame at C/L of rear axle to top of tire in jounce.
*L - From outside edge of shackle eyebolt
*W - Outside of frame to top of tire in jounce.

NOTES:

▽ TORQUE ALL WORM GEAR DRIVEN HOSE CLAMPS TO 4.8 ± 0.8 NM [43 ± 7 IN LB]

[ ] DIMENSIONS ARE INCHES

* NOT SUPPLIED BY FORD MOTOR COMPANY

▽ CRITICAL CONTROL ITEM

Remove and discard the Ford installed fuel system components (provided for shipping purposes only) except save and reuse the metal neck and cap assembly.

Use the new hoses, pipes, scuff guards, tie wraps, and clamps provided in the dunnage kit.

The completed fuel fill system must provide a 4 degree minimum continuous downward slope to the fuel tank. Additional support may be required to prevent hose sagging which could cause spray or spitback during normal fueling operations.

Do not extend the fuel fill system outboard of the second unit body.

The Carbon Canister Fresh Air Tube should be secured in a clean location, There are no specific requirements for location or orientation.

Weight Unit: Pounds

1) Load rating represents maximum allowable weight of people, cargo and body equipment and is reduced by optional equipment weight.
2) Gross Axle Weight Rating is determined by the rated capacity of the minimum component of the axle system (axle, computer-selected springs, wheels, tires) of a specific vehicle. Front and rear GAWRs will, in all cases, sum to a number equal to or greater than the GVWR for the particular vehicle. Maximum loaded vehicle (including passengers, equipment and payload) cannot exceed the GVW rating or GAWR (front or rear).

NOTE: Front spring/GAWR on Chassis Cab models is assigned or specifically selected.

Weight Unit: Pounds

(1) Load rating represents maximum allowable weight of people, cargo and body equipment and is reduced by optional equipment weight.
(2) Gross Axle Weight Rating is determined by the rated capacity of the minimum component of the axle system (axle, computer-selected springs, wheels, tires) of a specific vehicle. Front and rear GAWRs will, in all cases, sum to a number equal to or greater than the GVWR for the particular vehicle. Maximum loaded vehicle (including passengers, equipment and payload) cannot exceed the GVW rating or GAWR (front or rear).

NOTE: Front spring/GAWR on Chassis Cab models is assigned or specifically selected.

1) Load rating represents maximum allowable weight of people, cargo and body equipment and is reduced by optional equipment weight.
2) Gross Axle Weight Rating is determined by the rated capacity of the minimum component of the axle system (axle, computer-selected springs, wheels, tires) of a specific vehicle. Front and rear GAWRs will, in all cases, sum to a number equal to or greater than the GVWR for the particular vehicle. Maximum loaded vehicle (including passengers, equipment and payload) cannot exceed the GVW rating or GAWR (front or rear).

NOTE: Front spring/GAWR on Chassis Cab models is assigned or specifically selected.

(1) - The Height Data shown represents dimensions of a base/standard vehicle with no options. F and R Height dimensions are measured from ground to bottom of frame rail. LH dimension is measured from ground to top of frame rail. Actual height may vary due to production tolerances [completed vehicles only].
(2) - Height at Base Curb Weight with standard springs.
(3) - Loaded Height at spring rating with standard springs.
(4) - FW for F350 DRW with Aluminum rim = 1766mm [69.5in] (4x2) and 1767mm [69.6in] (4x4). FW for F450/F550 DRW with Aluminum rim = 1916mm [75.4in].
(5) - AA is maximum grown width at maximum tire pressure and load.
(6) - CW is DRW Rear Track width measured at rim mating flange surface.

(A) F450/F550 RC 60CA with 42.2" Aft Axle Frame Extension.
(B) F550 RC 84CA with 32.4" Aft Axle Frame Extension.
(C) K (SRW) = 180mm [7.1in] for 6.7L Diesel, 165mm [6.5in] for 6.2L Gas.

SRW – Single Rear Wheels
DRW – Dual Rear Wheels

*H - Top of frame at C/L of rear axle to top of tire in jounce.
*L - From outside edge of shackle eyebolt
*W - Outside of frame to top of tire in jounce.

(1) - The Height Data shown represents dimensions of a base/standard vehicle with no options. F and R Height dimensions are measured from ground to bottom of frame rail. LH dimension is measured from ground to top of frame rail. Actual height may vary due to production tolerances [completed vehicles only].
(2) - Height at Base Curb Weight with standard springs.
(3) - Loaded Height at spring rating with standard springs.
(4) - FW for F350 DRW with Aluminum rim = 1766mm [69.5in] (4x2) and 1767mm [69.6in] (4x4).FW for F450/F550 DRW with Aluminum rim = 1916mm [75.4in].
(5) - AA is maximum grown width at maximum tire pressure and load.
(6) - CW is DRW Rear Track width measured at rim mating flange surface.

(A) F450/F550 RC 60CA with 42.2" Aft Axle Frame Extension.
(B) F550 RC 84CA with 32.4" Aft Axle Frame Extension.
(C) K (SRW) = 180mm [7.1in] for 6.7L Diesel, 165mm [6.5in] for 6.2L Gas.

SRW – Single Rear Wheels
DRW – Dual Rear Wheels

*H - Top of frame at C/L of rear axle to top of tire in jounce.
*L - From outside edge of shackle eyebolt
*W - Outside of frame to top of tire in jounce.

(1) - The Height Data shown represents dimensions of a base/standard vehicle with no options. F and R Height dimensions are measured from ground to bottom of frame rail. LH dimension is measured from ground to top of frame rail. Actual height may vary due to production tolerances [completed vehicles only].
(2) - Height at Base Curb Weight with standard springs.
(3) - Loaded Height at spring rating with standard springs.
(4) - FW for F350 DRW with Aluminum rim = 1766mm [69.5in] (4x2) and 1767mm [69.6in] (4x4).FW for F450/F550 DRW with Aluminum rim = 1916mm [75.4in].
(5) - AA is maximum grown width at maximum tire pressure and load.
(6) - CW is DRW Rear Track width measured at rim mating flange surface.

(A) F450/F550 RC 60CA with 42.2" Aft Axle Frame Extension.
(B) F550 RC 84CA with 32.4" Aft Axle Frame Extension.
(C) K (SRW) = 180mm [7.1in] for 6.7L Diesel, 165mm [6.5in] for 6.2L Gas.

SRW – Single Rear Wheels
DRW – Dual Rear Wheels

*H - Top of frame at C/L of rear axle to top of tire in jounce.
*L - From outside edge of shackle eyebolt
*W - Outside of frame to top of tire in jounce.

Design Info / Recommendations

SUPER DUTY F-SERIES
Design Info / Recommendations
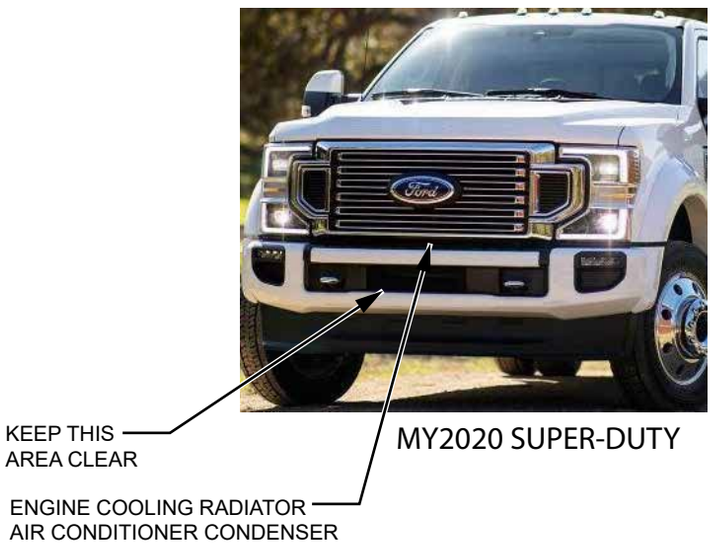
Ambulance

NOTE:
A Ford vehicle is sutiable for final stage manufacture into a ambulance only if eqipped with a ford ambulance preparation package.Ford urges ambulance manufacturers to follow the recommendation furnished in the incomplete Vehicle manual, (and any pertinent supplements), and the Qualified Vehicle Modifier(QVM) guidelines. Using a Ford Vehicle without the Ford ambulance Preparation package to produce an ambulance voids the Ford waranty and could result in elevated the underbody temperature, fuel over-pressurization and the risk of fuel expulsion and fires. Vehicles eqipped with Ford Ambulance Preparation packages have labels located on (the inside) driver door lock pillar that state that the vehicle is so equipped.

INFORMATION:
Ford urges careful consideration of the recommendations that follow.They are based on analyses of component and vehicle tests,actual service situation, and engineering judgements.Disregard of these recommendations may affect the duarbility,reliability,handling and performance characteristics of a completed vehicle and may elevate underbody temperature and increase the potential for fire or may affect the safety of the occupants in the event of an accident.
These recommendations are supplemental to U.S.And Canadian Motor Vehicle Safety compliance representaions provided in the https://fordbbas.com/publications. Additional information is also provided in this book and the *Ford Truck Shop Manual* which may be helpful to Subsequent stage manufacturers are encouraged to contact the Ford Truck Body Builder Advisory Service if they have any question conerning these recommendations; contact information is available at online at https://fordbbas.com



GUIDELINES

1. All Exhaust System, Electrical and Underbody Heat Management statements in the Second Unit Body Mounting section, and also the GENERAL BBLB document (on https://fordbbas.com/publications), apply to completed ambulance type vehicles.

2. Equipment such as flashing lights and sirens,spare tire,or any other accessories should not be installed in the grille area forward of the radiator or air cleaner air inlet. Doing so restricts proper airflow through the radiator and engine compartment.Lights,Speakers or sirens should not be mounted in the center area of the grille.Equipment should be mounted as far outboard as possible, not to exceed 90 square inches each or 180 square inches combined in area.Electrical equipment,regardless of mounting location,should not be grounded through the hood sheet metal nor hinges due to possible damage to the radio system and wiring.
An ambulance is not to be used as a tow vehicle.

SUPER DUTY F-SERIES
ALL SUPER-DUTY
SPOTLIGHT MOUNTING GUIDELINES (ON A-PILLAR) (Q-275)

Upfitters may consider mounting a handoperated spotlight to the Super-Duty A-pillar utilizing a maximum ½" diameter hole per these guidelines.

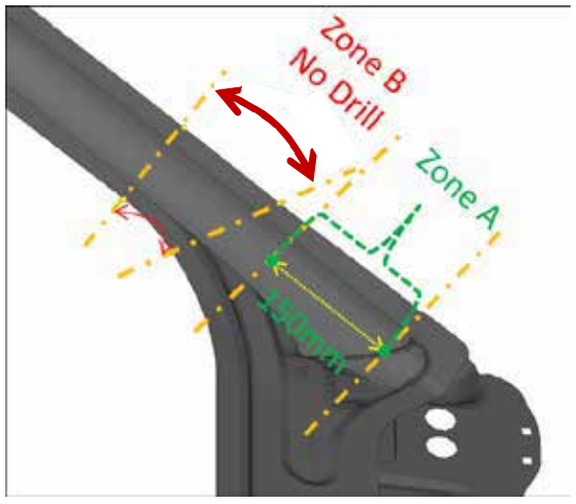


Figure 1 – Drill Zone

Figure 1: Drill hole in Zone A from A-pillar outer surface at the angle required to mount the spotlight. Do not drill the A-pillar and its components at Zone B (outer surface, hydro-formed tube and innermost surface).
Avoid any components/assemblies held within or between the A-Pillar structure and the plastic interior trim when drilling attachment holes.

Figure 2: Cross sectional view looking down on the Apillar from above showing the structural layers of the Apillar

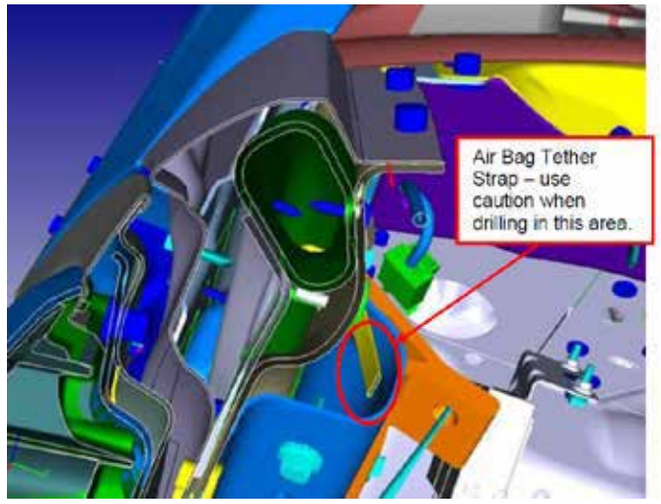

Figure 2 – A-pillar Cross-section

Figure 3: Interior wall attachment of the air bag tether. Care must be taken when drilling through the a pillar to avoid the tether.

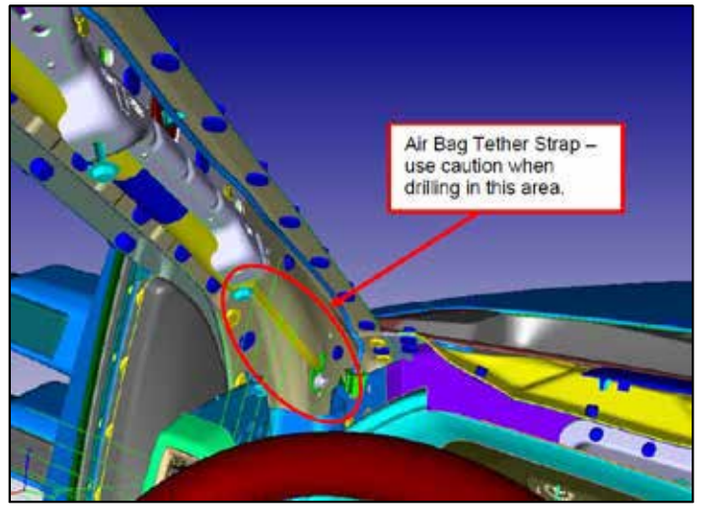

Figure 3 – Air Bag Tether

Note that the final responsibility for the compliance of the completed vehicle rests with the vehicle modifier to certify, as prescribed by Title 49, Code of Federal Regulations, Part 567.5, that the vehicle conforms to all applicable Federal Motor Vehicle Safety Standards.

Aftermarket Auxiliary AC System Control

This is a summary of BBAS Bulletin Q-255 for Super-Duty Chassis Cab trucks. Refer to the actual bulletin, located on www.fordbbas.com/publications, for the full instructions for Final Stage Manufacturers to add auxiliary air conditioning systems. No prep packages are available. Tap into the system using custom lines that obtain the liquid between the receiver dryer and front Thermostatic Expansion Valve (TXV), and return the suction line between the front TXV and the compressor. The secondary evaporator must use a TXV.

The performance of the Ford defrost and defog system must not be diminished by the addition of auxiliary heater or air conditioning systems. Final Stage Manufacturers are reminded of their responsibility to maintain compliance to **FMVSS 103** and **CMVSS 103**, Windshield Defrosting and Defogging Systems.

The addition of aftermarket auxiliary air conditioning will require control of the AC clutch via vehicle CAN bus. It is recommended that when installing an auxiliary AC/Heater system package the Final Stage Manufacturer meet or exceed the current standard of the current production vehicle line in occupant comfort performance both in heating and air conditioning.

AIR CONDITIONING

1. R134a charged AC systems must use PAG type lubricating oil YN-12-D, Ford part number WSH-M1C231-B. Always use the same refrigerant and oil as equipped with the production vehicle.

Reference current production R134a & PAG oil charge levels:

F350 / 450 / 550	Transmission	R134a (oz)	PAG Oil (oz)
Gas	TorqShift ® 6R or 5-Spd Manual	27 ± 1.0	4.1
Gas or Diesel	TorqShift ® 10R	27 ± 1.0	3.7

2. Ford Motor Company front system specs:
   - TXV size: 2.0 Ton (Gas with TorqShift ® 6R or 5-Spd Manual).
   - TXV Size: 1.5 Ton (Gas or Diesel with TorqShift ® 10R).
   - AC Compressor Displacement: 200cc fixed (Gas with TorqShift ® 6R or 5-Spd Manual).
   - AC Compressor Displacement: 170cc eVDC (Gas or Diesel with TorqShift ® 10R).
   - AC Condenser heat rejection (Gas): 11.3KW avg (Gas with TorqShift ® 6R or 5-Spd Manual).
   - AC Condenser heat rejection (Diesel): 11.3KW avg (Gas or Diesel with TorqShift ® 10R).
   - AC Condenser heat rejection (Gas with 10-speed transmission): 12.9 kW
3. Auxiliary AC unit musts:
   - Do NOT use CCOT / orifice tube systems in combination with the front Ford Motor Company TXV system.
   - A TXV with a refrigerant bleed is required. This will allow oil and refrigerant to return back to the AC Compressor.
   - It is the responsibility of the Final Stage Manufacturer when combining an auxiliary AC system with the Ford Motor Company AC system to perform a REFRIGERANT CHARGE LEVEL DETERMINATION TEST and OIL IN CIRULATION and EVAPORTATOR CORE ICING.
   - It is the responsibility of the Final Stage Manufacturer to maintain a 4% suspended oil ratio in the AC system for proper compressor lubrication.
   - A label stating the total refrigerant charge, type of refrigerant (R134a), and type of compressor lubricating oil (PAG), must be affixed in a conspicuous place in the engine compartment.
   - Compressor discharge gas temperature should not exceed 130°C skin temperature when measured under any conditions. Skin temperature should be measured on the AC discharge line immediately out of the compressor below the muffler.
4. At no time should the fan shroud or stator be modified or trimmed.
5. Do not modify any of the front end seals to the cooling module. These prevent hot air recirculation from coming back into the AC Condenser.
6. Establish a quality control method to inspect and resolve leaks, kinks, inadequate clearance issues, and total system operations.
7. DO NOT splice into any compressor wire harness. Must use an aftermarket CAN vehicle-control module to communicate with vehicle to activate compressor clutch.
8. If rear AC system is ON the front AC may be ON or OFF. The aftermarket CAN control module will request the AC clutch on if the rear AC is on and the front AC is off.

CLIMATE CONTROL - GHG EVAPORATIVE EMMISSIONS

Pursuant to California regulation 17 CCR §95663, the specific leakage for this vehicle (as built by Ford Motor Company) is shown in the table below (see “J2727 Leakage Value” column). If the vehicle air conditioning system is modified in any way, or air conditioning systems are added, the intermediate or final-stage manufacturer must calculate the final system leakage. If desired, the spreadsheet used by Ford to calculate the J2727 Leakage is available, and can be edited to reflect the modified system. Please contact Ford BBAS to request a copy of the vehicle line specific GHG Evaporative Emissions Worksheet: https://fordbbas.com

MY	Vehicle Line	Features/Models	Evaporator	Engine	Refrigerant	Charge Size of A/C System (kg)	J2727 Leakage Value (g/yr)	Max Allowed Leakage

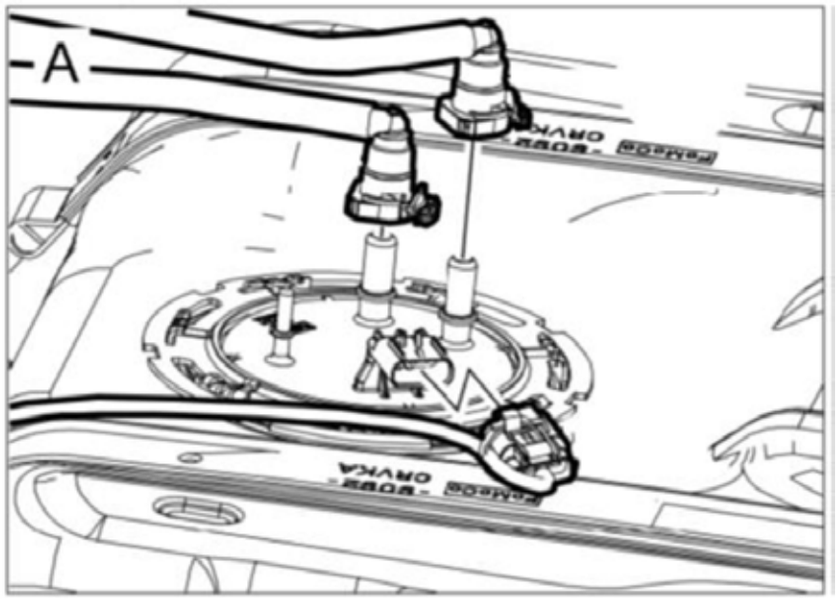
Fuel System – Aux Fuel Port Connector Kit

To use the auxiliary fuel port on the F350-550 Chassis Cab aft-of-axle or mid-ship fuel tank, a service kit can be obtained from your local Ford dealership parts department.

Aux Fuel Port Service Kit Number: **9C2Z-9B210-A**

The kit includes a quick connector, a clamp and tag. Install this kit to allow installed equipment (such as a generator) to use fuel from the vehicle fuel tank.



All Super-Duty Chassis Cab fuel tanks (except the aft tank on dual-tank diesels) come equipped with an Auxiliary Fuel Port located in the fuel sender unit on the top of the fuel tank. These Aux Fuel Ports can provide a fuel supply to upfitter-installed equipment such as generators. Aux Fuel Ports are not available on Super-Duty Pickups or Box-deletes.

Chassis Cab Super-Duty F-Series mid-ship and aft-of-axle fuel tanks are equipped with an auxiliary fuelport in the fuel sender unit. The purpose is to provide a fuel supply for upfitter-installed accessories such as generators.

Model	Fuel Tank Capacity *	
	26.5 Gallon	40 Gallon
	Remaining Fuel Volume (Gallons) at Auxiliary FuelTube Shut-off	
F-Super-Duty (Gasoline)	3.4	5.0
F-Super-Duty (Diesel)	3.4	5.0

* Fuel volumes are estimated

[ ] DIMENSIONS ARE INCHES.

J NOT SUPPLIED BY FORD MOTOR COMPANY

▽CRITICAL CONTROL ITEM

- Routing of filler hose and vent hose must not contain any sumps
- Hoses should be trimmed for proper length
- Zip-tie, or similar fastener must be used to retain hoses within desired routing path
- Hoses must not be kinked (no air/liquid flow restrictions)

Remove and discard the Ford installed UREA system fill components (provided for shipping purposes only) except save and reuse the metal neck and cap assembly.

Use the new hoses, pipes, scuff guards, tie wraps, and clamps provided in the dunnage kit.

The completed urea fill system must provide a minimum 2-degree continuous,downward slope to the UREA tank. urea tank. Additional support may be required to prevent hose sagging which could cause spray or spitback during normal filling operations.

Do not extend the UREA fill system outboard of the second unit body.

∇ CRITICAL CONTROL ITEM

Remove and discard the Ford installed fuel system components (provided for shipping purposes only) except save and reuse the metal neck and cap assembly.

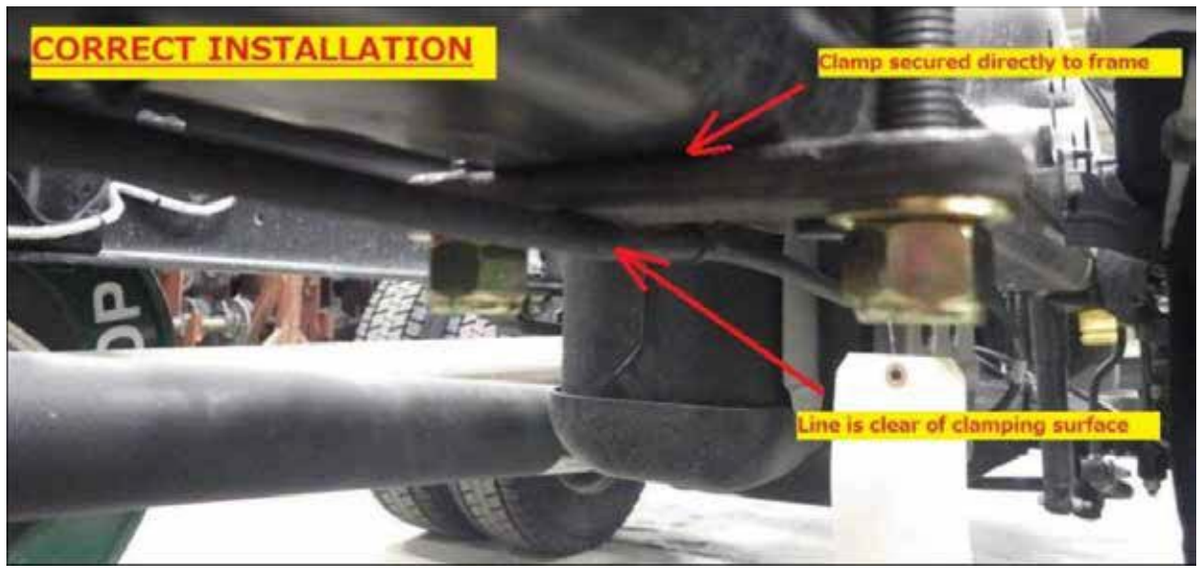
Use the new hoses, pipes, scuff guards, tie wraps, and clamps provided in the dunnage kit.

The completed fuel fill system must provide a 4 degree minimum continuous downward slope to the fuel tank. Additional support may be required to prevent hose sagging which could cause spray or spitback during normal fueling operations.

Do not extend the fuel fill system outboard of the second unit body.

The installation of Tube Extension F81A-9B149-HA will permit the location aft-of-axle fuel fill housing to be no further rearward than the centerline of the fill hose as it passes through the frame.

SUPER DUTY F-SERIES
DEF Line, DEF Tank, SUB Mounting



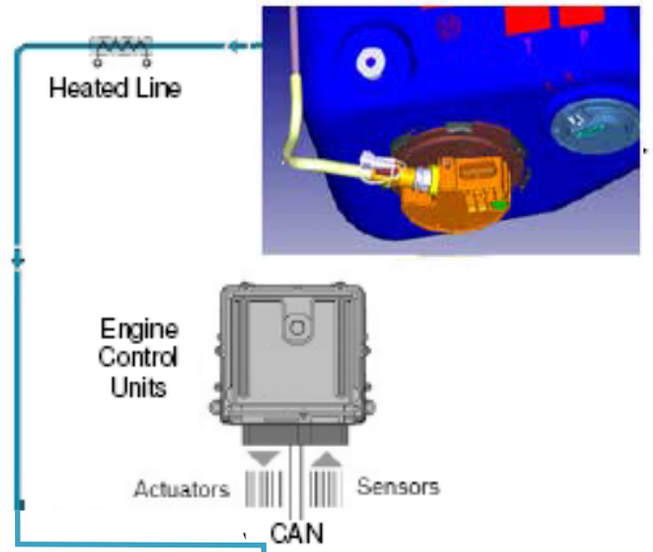
On certain chassis cab trucks with the 6.7L diesel engine, the DEF line hose is routed along the lower side of the frame rail. Care should be taken when using U-bolts to attach a Second Unit Body (SUB) to the frame to NOT clamp down on the DEF hose with the U-bolt. Instead, position the DEF hose underneath the U-bolt Reference **BBAS Bulletin Q-271.**

To prevent collapse of the frame side rail flanges when U-bolts are used for the attachment of bodies to the truck chassis, vertical spacer bars must be used between the upper and lower flanges at each U-bolt.

All box-delete and chassis cab trucks with the 6.7L diesel engine come with a DEF-fill hose kit (which includes a 90-degree fitting) to facilitate relocating the DEF fill neck to a Second Unit Body. Reference **BBAS Bulletin Q-260.**

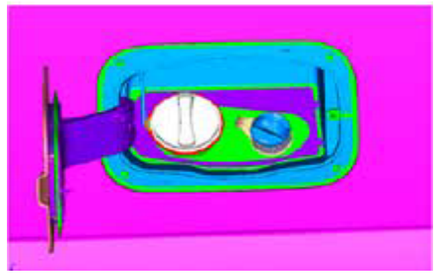
On all chassis cab trucks with the 6.7L diesel engine with aft fuel tank, the DEF tank may be relocated from between the frame rails to a location outboard of the frame rails. Reference **BBAS Bulletin Q-267.**

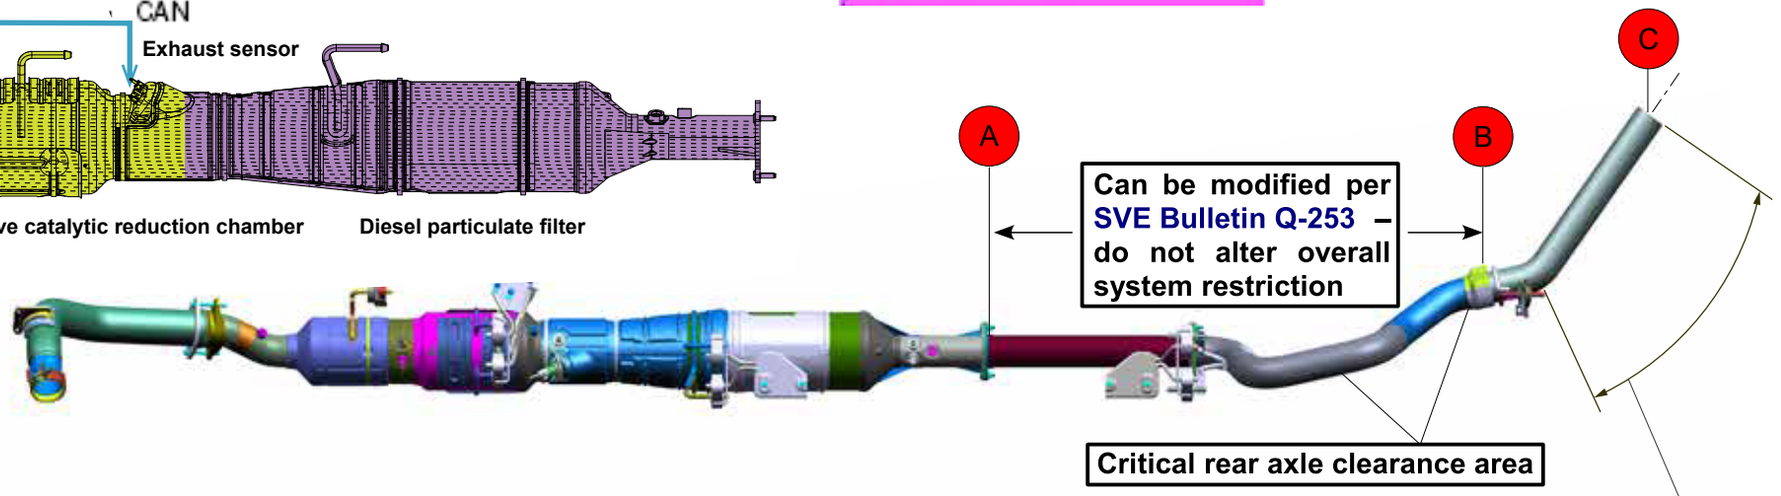
SUPER DUTY F-SERIES
EXHAUST AFTERTREATMENT
DIESEL ENGINE EMISSIONS



DEF Tank Unit including Supply Module (heated), Temperature and Level Sensor, Heated Reservoir and Splashing Measures

- **Selective Catalyst Reduction (SCR) to help meet diesel emissions requirements**
- **Requires the use of Diesel Exhaust Fluid (DEF – aka Urea)**
- **The DEF tank is sized to sustain a typical oil change interval**
- **The tank and lines are heated to prevent freezing**
- **The pickup truck DEF fill cap is located next to the diesel fill cap**





- **PT A – PT B: Any modifications between Pts A – B must not shorten the centerline length between the two points to a length less than that of the shortest wheelbase. Minimum Centerline Length = 1160 mm for reference.**
- **PT B – PT C: Any modifications between Pts B – C must not shorten the centerline length between the two points and should be made using pipe diameter equivalent to the OEM assembly. Minimum Centerline Length – 763.75 (for reference).**
- **Modifications must not change system restriction or alter the performance of the exhaust system.**
- **Pipes used in any modifications must be equivalent diameter, wall thickness and material a the OEM parts.**
- **Appropriate heat shielding must be utilized where required.**
- **See BBAS Bulletin Q-253 for additional information.**

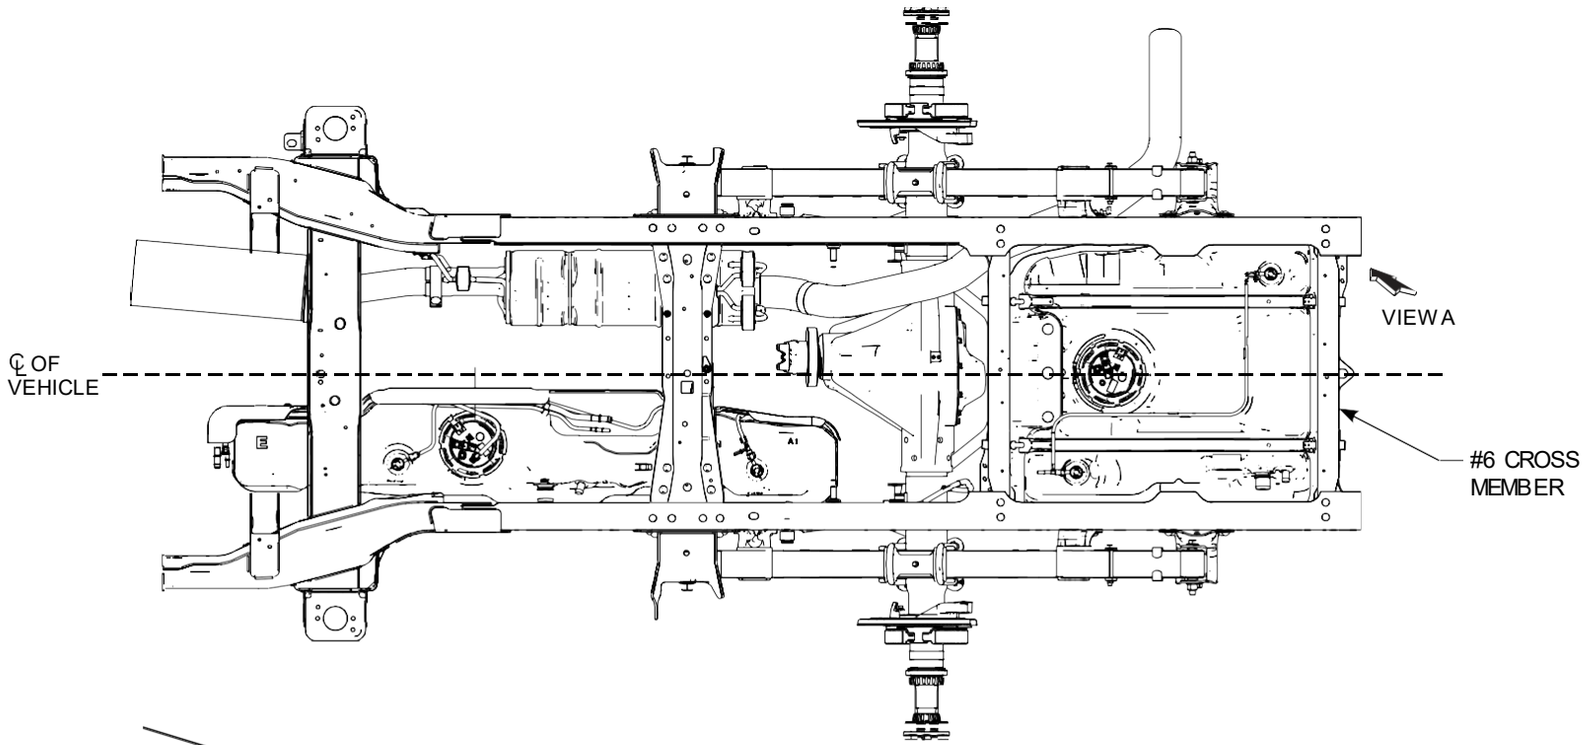
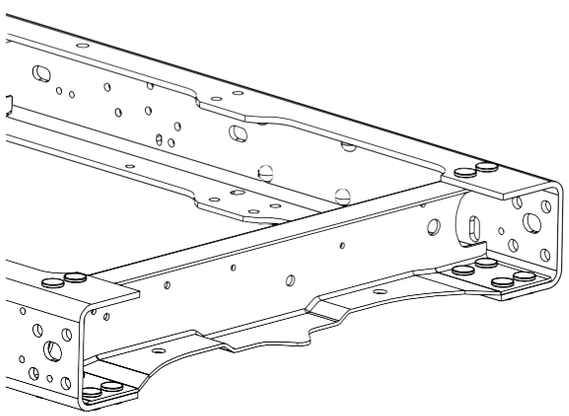
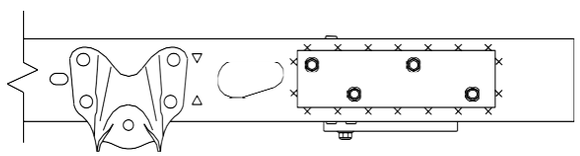
FRAME EXTENSION RECOMMENDATIONS





VIEW A
(TYPICAL)



REINFORCEMENT PLATES

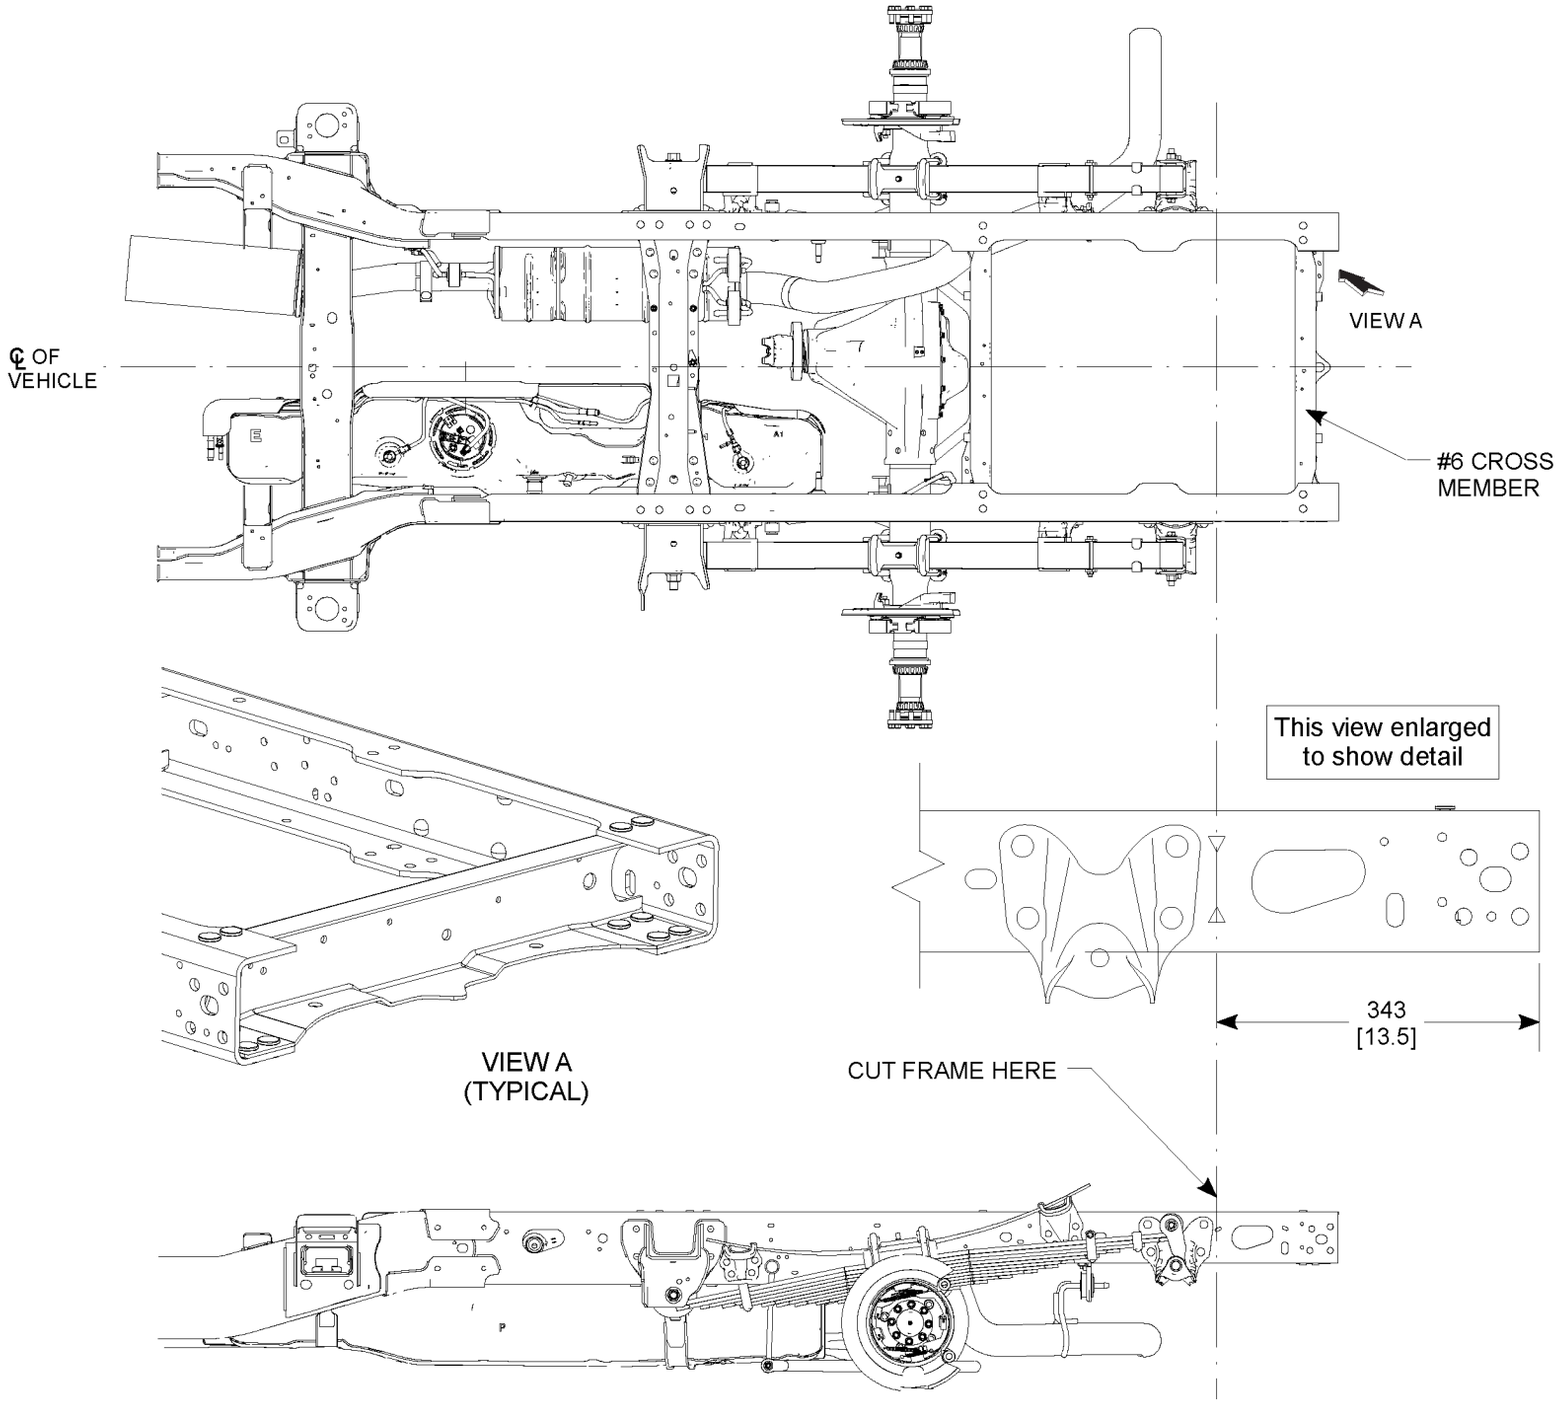
FRAME EXTENSION RECOMMENDATIONS
(Applicable to all wheelbase models)

When it is necessary to add a frame extension to the Super Duty F-Series Chassis Cab, follow these suggestions:

- Clean contaminants off the back portion of the frame using steam, high pressure water or solvent.
- Protect the fuel system from weld sparks and splatter, being particularly careful with the rubber fuel fill hoses.
- Select a suitable mild steel channel (not iron) with a section modulus the same as the frame to be extended.
- Chamfer both the back of the frame and the end of the extensions to be welded. Remove the two rearmost lower rivets attaching the rear cross member to the frame. Weld an overlay plate onto the lower flange of the frame extension that extends approximately 2.5" under the frame end.
- Transfer the rivet hole location to the lower flange overlay plate and drill through the plate.
- Disconnect the battery (ies), the ABS module, and then the Powertrain Control Module (PCM). Connect the welding ground cable to the frame at the back of the vehicle.
- Clamp the extension into place and weld all around the top and sides, but not the lower flange, following normal welding practices.
- Grind the outer side of the vertical frame web down smooth, clamp on a reinforcement section of mild steel approximately 4" x 12" x 0.25" and skip weld to the frame and extension. Do not weld at the corners of the reinforcement to minimize stress concentrations. Note that this reinforcement may be combined with a rear shear plate and/or under-run bumper if desired, in which case it would be an "L" shape to pick up the added attachment points.
- Bolt through the lower overlay plate and frame section using a 5/8" Grade 5 flange- head bolt and nut (1).
- Drill through the frame and reinforcement; bolt using four 1/2" Grade 5 flange-head bolts and nuts (1).
- Coat the frame extension with a suitable protective paint. Reconnect the PCM module, ABS module and battery (ies).

(1)If flange-head fasteners are not available, regular hex heads may be substituted with one flat washer each under the head of the bolt and nut.

SUPER DUTY F-SERIES
DESIGN INFO / RECOMMENDATIONS
CHASSIS CAB – NARROW FRAME
FRAME OVERHANG SHORTENING RECOMMENDATIONS



FRAME OVERHANG SHORTENING RECOMMENDATIONS (applicable to all wheelbase models)

If a shorter rear frame overhang is required for the vocational body mounting, the builder must:

1. Order the chassis with the optional mid-ship fuel tank.
2. Drill out attaching rivets and remove the rear crossmember. Reinstall in the next forward crossmember mounting location provided using Grade 8 bolts, as described in the rivet replacement procedure in the Ford Service Manual.
3. Cut the frame along the line through the two triangle-shaped holes as depicted on this page using a cut-off wheel or saw. A torch is not recommended. If a torch is used within 4 inches of the rear suspension mounting attachments, these attachments must be either re-torqued (when bolts are used) or have the rivets removed and replaced with Grade 8 bolts per the procedure noted above.

NOTE — ON THE F-450/550 CHASSIS, THE FORWARD OUTBOARD REAR SUSPENSION BRACKET BOLT NEEDS TO BE SHARED WITH THE REAR CROSSMEMBER. RETORQUE WITH NEW GRADE 8 M12 BOLT AND NUT.

3. CG_{hp} – Horizontal CG location of Passenger Load as measured from the Center of the Front Wheel
4. All values should be considered estimates, if calculated CG values for the completed vehicle are close to limits stated in the applicable IVM, Ford recommends verification of CG by physical measurement of a completed vehicle.
5. CG_{vc} – Vertical CG location of Chassis as measured from the Ground
6. CGhl – Horizontal CG location estimate (midpoint of cargo area), as measured from the Center of the Front Wheel

SUPER DUTY F-SERIES
GUIDELINES FOR MODIFYING FORD TRUCK WHEELBASES EQUIPPED WITH ELECTRONIC STABILITY CONTROL (ESC)

The 2021MY F-Series have ESC (Electronic Stability Control) as standard feature content. Modification of the wheelbase can affect vehicle performance which could result in ABS or Stability Control faults/lights. The ESC system may also have a changed response from the production wheelbase configuration, but still provides acceptable driver assistance. It is the responsibility of the alterer or final stage manufacturer to evaluate modified vehicle configurations to ensure that vehicle performance is acceptable to their customer base.

Wheelbase modifications within the noted ranges below may necessitate a reflash of the ABS/ESC module to a new calibration. Any wheelbase outside of the noted ranges below will not be supported with calibrations. The Electronic Stability Control (ESC) feature will be supported when modifying F-Series Wheelbases (WB) as part of the intermediate or final stage upfit.

Super Duty: • F-450, F-550, and F-600
Wheelbases between 145” and 267”

Special Notes: The chassis wheelbase shall not be modified shorter than the shortest for each model (GVWR offered). For vehicles under 10K GVWR, FMVSS 126 does apply for ESC function and will need to be tested the by alterer or final stage manufacturer - refer to the Incomplete Vehicle Manual for specific FMVSS/CMVSS information

Please reference Bulletins Q-299R2 and Q-18R5 for more Information.

DESIGN INFO / RECOMMENDATIONS
SECOND-UNIT-BODY (SUB) MOUNTING GUIDELINES

MOUNTING TECHNIQUES FOR CHASSIS CAB (NARROW FRAME)

TECHNIQUE #1 – Shear Plates w/Longitudinal Frame

DO NOT WELD SHEAR PLATES TO OEM FRAME

- **Front Shear Plate Attachment**: use two bolts, nuts, and washers in the OEM frame, one bolt, nut and washer with a ¼" equivalent weld bead around three sides of the shear plate and the SUB-mounting frame, skip-welded at the shear plate corners. If front shear plate is not welded to the SUB-mounting frame, two bolts should be used instead of one. **SEE FIGURE A**
- **Rear Shear Plate Attachment:** use three bolts, nuts, and washers in the OEM frame, one bolt, nut and washer with a ¼" equivalent weld bead around three sides of the shear plate and the SUB-mounting frame, skip-welded at the shear plate corners. If rear shear plate is not welded to the SUB-mounting frame, two bolts should be used instead of one. **SEE FIGURE A**

TECHNIQUE #2 – Shear Plates w/Cross-Frame

DO NOT WELD SHEAR PLATES TO OEM FRAME

- **Front Shear Plate Attachment**: use two bolts, nuts, and washers in the OEM frame, two bolts, nuts and washers in the SUB-mounting frame. **SEE FIGURE B**
- **Rear Shear Plate Attachment:** use three bolts, nuts, and washers in the OEM frame, two bolts, nuts, and washers in the SUB-mounting frame. **SEE FIGURE B**

NOTES for Technique #1 and #2:

- A spacer between the OEM frame and SUB frame should be used and secured in such a manner as to maintain retention during installation and operational use. The spacer should have a slight taper which starts at the front of the SUB frame. **SEE FIGURE C**
- Front Shear Plates should be angled forward approximately 45 to 60 degrees from the horizontal. Front Shear Plates should be a sufficient distance from the front of the SUB to allow for frame flexing, i.e. Front Shear Plates should be placed behind the tapered section of the spacer.
- U-bolts must be installed every 2-3 feet between the front and rear shear plates.
- Vertical spacers must be used between the upper and lower frame flanges at each U-bolt to prevent collapse of the flanges. Do not notch the frame flanges to make U-bolt fit. **SEE FIGURE C**
- U-bolts or attaching hardware should not contact fuel, brake or electrical system components . A shear plate should be utilized if there is insufficient space for a U-bolt to be installed between the frame and fuel tank.
- All threaded fasteners (including U-Bolts) must be either 5/8" Diameter Grade 8, or M16 Property Class 10.9 for metric bolts and M16 Property Class 10 for metric nuts.
- Fastener Torques: 60-65 ft-lb for 5/8" fasteners, 200 +/- 30Nm for M16 fasteners.
- Direct the threaded end of the bolts away from any fuel, brake or electrical system components.
- U-Bolt torque should be checked every six months.

IMPORTANT –

The final stage manufacturer has the responsibility to certify that the completed vehicle conforms to all applicable Federal Motor Vehicle Safety Standards. The Incomplete Vehicle Manual, not these recommendations/guidelines, is intended to provide representations concerning the extent that compliance is determined by the design of the incomplete vehicle and prescribe conditions upon which these representations may depend.

DESIGN INFO / RECOMMENDATIONS
SECOND-UNIT-BODY (SUB) MOUNTING GUIDELINES (Cont'd)

TYPICAL INSTALLATION
(VIEW SHOWING INBOARD SIDE OF RAIL)

Where wrap-around body attachments (such as U-Bolts) are used, the frame side members must have flange reinforcement spacers to avoid flange damage when full torque is applied to attaching bolts. Spacers are recommended and must be cut out to clear brake lines, fuel lines, wiring, etc. If metal spacers are used, no welding to frame side members is permitted. Tapered spacers between vocational-body sill and frame side member flanges are recommended. Recommend taper is ½" at the front end, diminishing to contact 4 to 6 inches rearward. (see sketch for typical installations).

FIGURE C - CHASSIS CAB SUB-MOUNTING SPACER

MOUNTING TECHNIQUES FOR PICK-UP BOX DELETE (Wide Frame) w/56" CA.

- **Top-Bolting:** This technique uses the existing pickup box mounting holes / nuts to attach a SUB weighing 1800 kg (3968 lb.) or less. M14 PC10.9 bolts must be used in conjunction with the installed nuts in all 8 mounting locations provided. Torque for M14 fasteners is 133 +/- 20N-m. **SEE FIGURE D**

Note: If desired, the M14 metric nuts that come on the frame may be removed and replaced with 5/8" or other SAE sized nuts. In this case, it is the responsibility of the Final Stage Manufacturer to assess the structural integrity of the system based on the type and size of fasteners chosen, and to develop an appropriate torque specification.

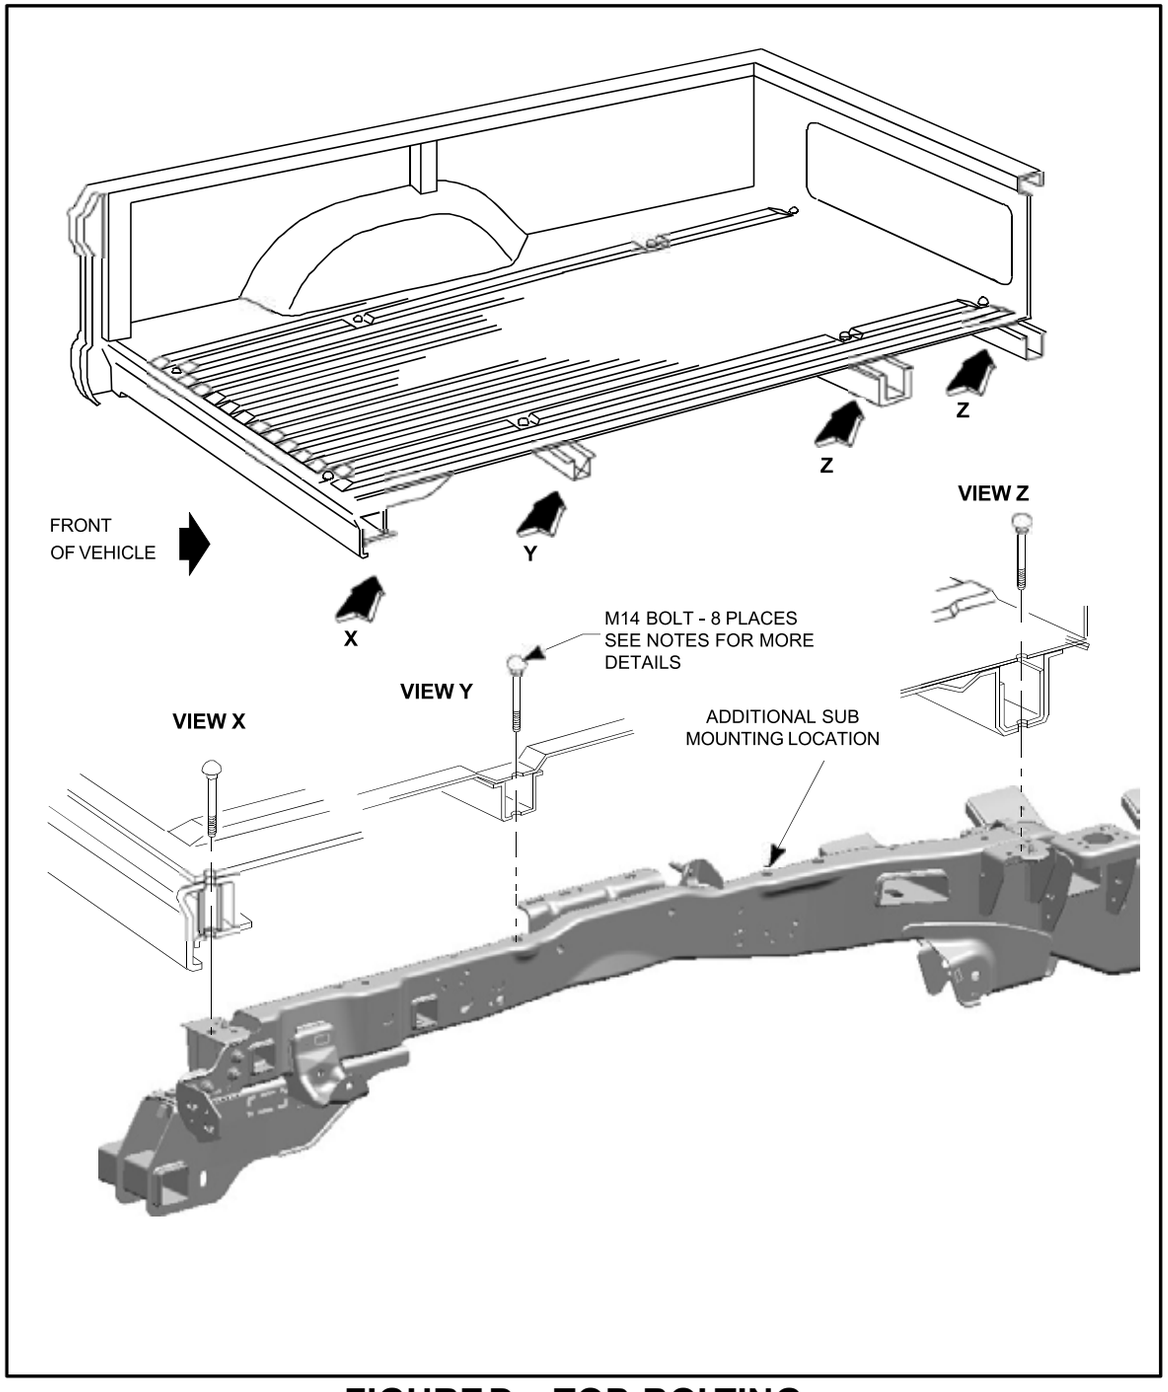

FIGURE D – TOP-BOLTING
SUB-Mounting for Pickup Box Delete / Removal

IMPORTANT –

SECOND -UNIT-BODY (SUB) MOUNTING GUIDELINES(Cont'd)

Aerial Lift / Severe Duty Prep Package

2021 SUPER DUTY CHASSIS CAB – The Aerial Lift / Severe Duty Prep Package (76X) is available and highly recommended for those customers whose vocations are in aerial buckets, cranes, severe off-road mining operations, roll back wreckers and roll-off dump second unit bodies. This package requires Payload Plus Upgrade Package (68M).

• 2021 SUPER DUTY CHASSIS CAB F-600 - Aerial Lift / Severe Duty Prep Package will be equipped as Standard feature content on all variants.
• 2021 SUPER DUTY CHASSIS CAB F-550 - Aerial Lift / Severe Duty Prep Package will be made as an Optional feature content.

Reference the 2021 SUPER DUTY® CHASSIS CAB Order Guide for Further details

CAD for Frame, frame reinforcements and other auxiliary parts available - submit requests via BBAS/ContactUs.

FORD CO-PILOT360™ TECHNOLOGY

Ford Co-Pilot360™ is a suite of driver-assist technology features that variously utilize a camera and/or radar system. The radar and camera systems help provide Ford Co-Pilot360 features such as:

- Pre-Collision Assist with Automatic Emergency Braking (AEB)
- Forward Collision Warning
- Audible Lane Departure Warning
- Automatic High Beam

Installed upfitter equipment should not infringe on the radar or camera view zones. The CAD files of the radar and camera view zones are available upon request via the Ford BBAS web site (www.fordbbas.com/contactus).

Consult the Order Guide for feature availability by vehicle model.

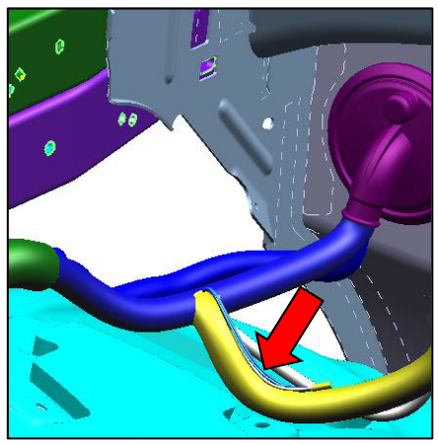
ALL SUPER-DUTY
CUSTOMER ACCESS CIRCUITS – SUMMARY

Ford Super-Duty trucks are provided with several types of Customer Access Circuits to accommodate various electrical access and control functionalities.

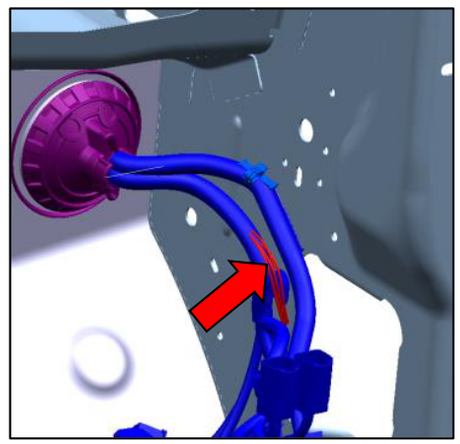
Pass-through Wires

All Super-Duty trucks come standard with a 4-wire bundle that is pre-routed through a grommet in the dash panel to provide a pathway between the cabin interior and the underhood compartment (engine bay). This pass-through harness has blunt-cuts on both ends. The in-cab blunt-cuts are located behind the interior trim side kick panel in the front passenger footwell. The underhood blunt-cuts are located on the passenger side just forward of the dash panel harness grommet. It may facilitate access to the underhood end of the pass-through wires by removing the front right wheel/tire and wheel arch liner.

Pass-through Wires	Wire Color
Wire 1	BN / WT
Wire 2	WH
Wire 3	WH / OG
Wire 4	GY / OG



Underhood
(Passenger Side)



Front Footwell
(Passenger Side)

Customer Access at Upfitter Relay Box

There are 4 customer-access blunt-cut circuits (14-gage), located under the Upfitter Relay Box in the engine bay in the same wire bundle as the 6 upfitter switch blunt-cuts, available for the following functions:

- Run / Start
- Battery Hot
- PTO Relay Output
- PTO Relay Control

See the Upfitter Relay Box section of this BBLB for more detailed information.

Upfitter Relay Box / Upfitter Switches

A 6-pack of Upfitter Switches are optionally available on all Super-Duty trucks. This feature provides a bank of 6 switches on the overhead center console in the cabin. These switches are pre-wired to the Upfitter Relay Box (with 6 blunt-cut output wires) located underhood on the passenger side. The Upfitter Switches, in conjunction with the Upfitter Relay Box, can be configured by the upfitter to control various upfitter-installed equipment.
See the Upfitter Relay Box and Upfitter Switches sections elsewhere in this BBLB for more detailed info.

SEIC / PTO / Customer Access Harness with Blunt-cuts

A connector is provided (with a mating blunt-cut harness) on all Super-Duty trucks, located behind the side kick panel in the passenger footwell, to allow control of the PTO system as well as access to 6 other vehicle system signal outputs. See the SEIC / PTO section of this BBLB for more details.

68	10 A	Powertrain control module.
69	60 A	Body control module power.
70	30 A	Trailer tow stop and turn lamps.

All vehicles (GVWR 10,000 lbs and under) completed in 2 or more stages (i.e. produced by Ford as incomplete vehicles) are required to comply with FMVSS 111 requirements for rear visibility (including rear-view camera). **FMVSS 111 requirements only affect vehicles 10,000 lbs GVWR or less.** This information is being provided to assist upfitters who are completing Super-Duty Chassis Cabs or Box-Delete vehicles comply with FMVSS 111 rear-view camera requirements using the available Ford reverse-camera kit.

Rear-View Camera Prep Kit (Order Code 872)
Required option on 10,000lbs GVWR and less

A rear-view camera and prep kit for incomplete vehicles is available as an orderable option (see Figures 1 and 2) with all Pick-up Box Delete and Chassis Cab incomplete vehicles. The optional Prep kit is available with the following displays:

		Display	
	Trim Level	4.2-inch	8-inch
Chassis Cab	XL	S	--
	XLT	--	S
	Lariat	--	S
Pickup / Box-Delete (1)	XL	S	O (2)
	XLT	--	S

(1) Order Code 66D
(2) Order Code 913

S – Standard
O – Optional

Rear-View Camera Service Kit (Service Part # JC3Z-19G490-D)

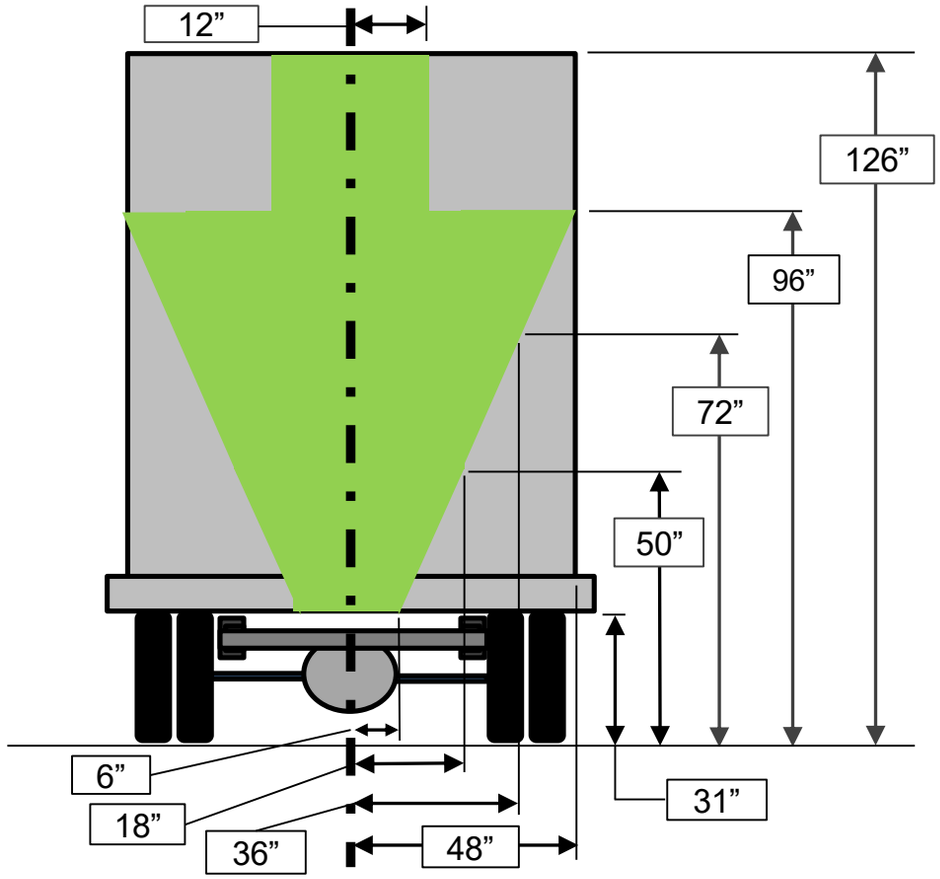
A service kit is also available through Ford Service. This service kit is compatible with all chassis cab and box-delete vehicles. Vehicles ordered with the base audio package will have a 4.2-inch display in the center stack. There is no longer a rear-view mirror display available on Super-Duty. For a chassis cab or box-delete camera kit installed post-production, a Ford Diagnosis and Repair System (FDRS) tool is required to make the parameter change needed to activate the service kit camera / display.

Ford Camera Kit Compliance Capability

Ford has tested the rear view camera kit in combination with the 4.2-inch and 8-inch displays. The camera / display pairing is capable of meeting the backup camera portion of FMVSS 111 when mounted in the zones defined below.

Compliance to FMVSS 111 is the responsibility of the upfitter who alters the vehicle. This information is provided for directional purposes only, based on testing done by Ford.

If equipped with a **4.2-inch** display OR **8-inch** display, the camera included in kit is capable of complying with FMVSS 111 field-of-view requirements when mounted in the areas defined in the figure below.



Instructions for enabling the camera / display are available at the following link:
http://www.fordservicecontent.com/ford_content/catalog/accessory_files/2020_P558_Rear_Camera_Kit_Enable_Disable.pdf

ALL SUPER-DUTY
SEIC / PTO / BCP OVERVIEW

Stationary Elevated Idle Control (SEIC)

SEIC is a powertrain control module (PCM) strategy that provides elevated engine speed to drive auxiliary commercial equipment such as hydraulic pumps, generators or air compressors.
SEIC can also be used to maintain vehicle battery charge under extreme electrical demands, although the Battery Charge Protect (BCP) feature is a more effective means for doing that.
SEIC is standard in all PCMs for Super-Duty trucks.
On 6.7L diesel only: Split-shaft mode engages the transmission output shaft.

Customer Access Wires for SEIC and VSO/CTO/PARK Signals

- Located in cabin, tagged and bundled behind the passenger side kick panel. Pass -thru wires are in the same location.
- The final-stage manufacturer or upfitter is required to supply the customer-interface equipment.

Transmission Power Take-off (PTO) Gear and Port

- Available on F-250/350/450/550/600. Standard On Diesel Chassis Cab.
- Available for TorqShift™ automatic transmissions by ordering "Transmission Power Take-Off Provision" (Order Code 62R).
  The PTO gear is direct-splined to the torque converter impeller hub.
- NEVER use any sealer, especially silicone-based, on the PTO port gasket.
- TorqShift™ 10R (10-speed) Automatic Transmission: The PTO gear delivers up to 300 ft-lbs of torque (with the diesel) engine and 250 ft-lbs (for the 6.2L and 7.3L gas engines) to the aftermarket PTO.
- The powertrain cooling system can manage the heat of 40 HP (gas engine) and 60HP (diesel engine) during continuous operation.
  Higher horsepower can be delivered, but for shorter durations depending on the amount of power required. Upfitters should consult with the PTO manufacturers to get their continuous power ratings.
- Some aftermarket PTOs may not be capable of using the full available torque. Consult with the aftermarket PTO supplier to ensure the appropriate PTO selected for the application.

Summary – M ax PTO Loads

Engine	Mode	Max Load at Transmission PTO Gear
6.7L Diesel	Stationary	300 ft-lbs
	Mobile	150 ft-lbs (750-900 RPM)
		200 ft-lbs (>900 RPM)
	Split-Shaft	N / A
7.3L Gas	Stationary	250 ft-lbs
	Mobile	125 ft-lbs
6.2L Gas	Stationary	250 ft-lbs
	Mobile	115 ft-lbs

Neutral Idle with F350, F450, F550, And F600 Chassis Cab Vehicles

Your transmission could reduce the load On the engine when the vehicle stops, and The gear selector is in drive (D) to reduce Fuel consumption and emissions. The Transmission resumes operation when you Release the brake. This feature activates When the transmission is sufficiently Warmed, and the vehicle is on a level slope.

Battery Charge Protect (BCP)

Available on all Super-Duty vehicles. This is a PCM feature that helps maintain battery state-of-charge. When 12V is applied to the BCP SW circuit, the engine speed goes immediately to 600 RPM. From this state, the PCM uses battery voltage as w ell as ambient air temp and engine oil temperature information to raise engine speed higher to maintain battery charge.

Adaptive Cooling

This PCM strategy automatically restricts engine power when it senses an over-temperature condition and may interrupt the SEIC-PTO operation.
Typically, the over-temperature condition it reacts to will also show up on the temperature gage on the instrument panel.
Elevated engine speed, typical of SEIC operation, may help avoid Adaptive Cooling occurrence due to the resultant additional engine and transmission coolant flow.
However, depending on the auxiliary PTO power being demanded, 900 rpm may not be enough to prevent the power train from entering Adaptive Cooling mode, but 1500 rpm may.

Additional Schematics beyond those shown in this document are available in the workshop manual. Refer to BBAS Bulletin Q-118 fo instructions on how to access to Ford Wiring diagrams, Workshop manuals and powertrain control/Emissions Diagnostics.

SEIC – Stationary Elevated Idle Control

Operates with transmission in "Park" at elevated engine speed. Intended to be commanded ONLY by applying battery voltage to certain customer-access blunt-cut wire circuits, and adding a target-speed resistor, and is only available when the vehicle road speed CAN signal is zero.

- Includes a PTO RELAY circuit which changes from open-circuit to ground when enables are met that may be used to activate an indicator lamp and/or relay that can be used to provide power to an aftermarket PTO clutch or solenoid.
- Engine speed ramp-rates are configurable, by means of an FDRS tool, for all powertrains. Default ramp-rate for all powertrains is 200 RPM/second.
    - Configurable ramp rates are as follow s:
        - Diesel: 100 – 800 RPM/sec (in 100 RPM/sec increments).
        - Gas: 100 – 1000 RPM/sec (in 100 RPM/sec increments).
- See wiring diagram elsewhere in this BBLB document.

SEIC Typical Engagement Sequence

1. 12V is applied to PTO 1 circuit.
2. PCM looks for the following enabling conditions:
    - Parking brake applied.
    - Foot off of service brake.
    - Vehicle in PARK.
    - Foot off of accelerator pedal.
    - Vehicle speed is 0 mph (stationary).
    - Engine at a stable base idle speed.
    - Transmission Oil Temp above 20° F.
    - 6.7L only - Engine Coolant Temperature (ECT) 20° F minimum.
    - 6.2L / 7.3L only - Engine Coolant Temperature (ECT) 20° F minimum.
3. Command is sent to boost the transmission hydraulic line pressure to a minimum of 200 psi, which is used by the aftermarket PTO supplier to hold their PTO Clutch. Command is sent to increase engine speed to 900 rpm.
4. The PTO RLY circuit changes from open-circuit to ground. If the upfitter uses the circuit wiring offered in this document then this will provide battery voltage to the aftermarket PTO solenoid to engage the PTO.
5. Engine RPM ramps to the target speed as determined by the resistor selection.
6. See complete list of PTO Enable / Disable conditions elsewhere in this BBLB.

Mobile Mode

Operates in all gears and all vehicle speeds. The engine idle speed is elevated to 750 RPM when the Mobile Mode is initiated. Engine RPM is controlled by the driver through the throttle pedal but peak engine speed is not limited beyond normal operating ranges.

Note: Requires a 641ohms Resistor to be installed by upfitter to achieve full engine speed range

Engine Speed Limiting (ESL) feature will be available on all 3 powertrains: ESL feature controls the engine speed in Mobile Mode below a selectable maximum threshold. Maximum RPM is determined by the resistor installed between the PTO_REF and PTO RPM circuits. See subsequent page for RPM / resistor values.

- Transmission behavior changes in Mobile Mode due to upshifting performance; e.g. it is possible for a customer to reach max. RPM in a lower gear, and the transmission is unable to accelerate – or upshift – to the next gear.
- If this action is not desired, the operator can:
    - Ease up on the accelerator pedal and receive an upshift, or…
    - Put the transmission in manual mode and select the gears manually.
- Selected target RPM has a margin of +/- 15% based on transient conditions (for example, descending a grade).
- Mobile PTO may overshoot selected the RPM by 100-200 RPM for drivability.
    - An additional aftermarket PTO rev limiter may be required to prevent over-speed damage to attached pumps and equipment.

Note: If the PTO feature is used for extended periods of time without vehicle movement it is recommended to switch to Stationary Mode.

Note: In Mobile Mode, there is no engine speed limiter unless the Engine Speed Limiter (ESL) feature is enabled via the resistor chart (provided on a subsequent Page in this BBLB)

Mobile Mode Typical Engagement Sequence

1. 12V applied to PTO 2 circuit.
2. PCM looks for the following enabling conditions:
    1. Transmission Oil Temp above 20° F.
    2. 6.7L: Engine Coolant Temp (ECT) 20° F minimum.
    3. 6.2L / 7.3L: Engine Coolant Temperature (ECT) 20° F minimum.

    (See subsequent page for complete list of Enable / Disable conditions.)
1. PCM looks for voltage on PTO RPM circuit.
2. Command is sent to boost transmission hydraulic -line pressure to a minimum of 200 psi, which is used by the aftermarket PTO supplier to hold their PTO clutch.
3. The PTO RLY circuit changes from open-circuit to ground. If the upfitter uses the circuit wiring offered in this document then this will provide battery voltage to the aftermarket PTO solenoid to engage the PTO.
4. Engine idle increases to 750 RPM.

Body Builders Layout Book

ALL SUPER-DUTY
CONFIGURABLE SEIC ENGINE SPEEDS (GAS)
SAMPLE SCHEMATICS

Sample Procedure: Three-speed SEIC (1300, 1800 and 2400 RPM) with 2 switches

Scenario 1 (2400 RPM): Choose a resistor for the highest of the three desired speeds, 2400 RPM in this example, which requires a 641-Ohm resistor (per the resistor tables). This will be referred to as R3. When Switch 2 is closed, the total resistance between PTO_VREF and PTO_RPM is R3 = 641 Ohms.
R3 = 641 Ohms.

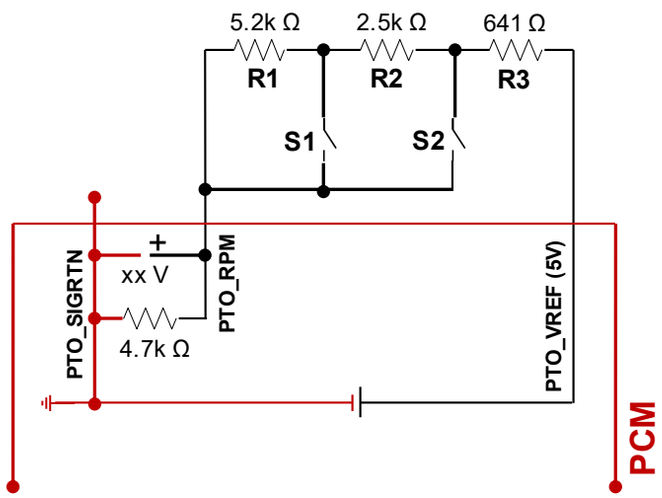
With switch 1 closed or open and switch 2 closed, the total resistance between PTO_VREF and PTO_RPM is R3 = 641 Ohms, resulting in 4.4 Volts between PTO_RPM and PTO_SIGRTN, resulting in 2400 RPM's.

Scenario 2 (1800 RPM): Choose a resistor for the middle speed, 1800 RPM in this case, which requires a total resistance between PTO_VREF and PTO_RPM of 3133 Ohms. When Switch 1 is closed, the total resistance between PTO_VREF and PTO_RPM needs to be 3133 Ohms (per the resistor tables), which is the sum of R3 and R2. Switch 2 must be open in this scenario.
Since R3 + R2 = 3133 Ohms,
R2 = 3133 Ohms – R3
R2 = 3133 Ohms - 641 Ohms
R2 = 2492 Ohms

With switch 1 closed and switch 2 open, the total resistance between PTO_VREF and PTO_RPM is R3+R2 = 3133 Ohms, resulting in 3.0 Volts between PTO_RPM and PTO_SIGRTN, resulting in 1800 RPM's (1805 RPMs to be exact).

Scenario 3 (1300 RPM): Choose a resistor for the lowest of the three speeds, 1300 RPM in this case, which requires a total resistance between PTO_VREF and PTO_RPM of 8356 Ohms (per the resistor tables). When switch 1 and switch 2 are both open, the total resistance between PTO_VREF and PTO_RPM needs to be 8356 Ohms, which is the sum of R1, R2 and R3.
Since R1 + R2 + R3 = 8356 Ohms,
R1 = 8356 Ohms – R2 – R3
R1 = 8356 Ohms - 2942 Ohms - 641 Ohms
R1 = 5223 Ohms

With switch 1 and switch 2 both open, the total resistance between PTO_VREF and PTO_RPM is R1+R2+R3 = 8356 Ohms, resulting in 1.8 Volts between PTO_RPM and PTO_SIGRTN, resulting in 1300 RPMs (1295 RPM to be exact).



Sample Procedure: Three-speed SEIC (1300, 1800 and 2400 RPM) with 3-position switch

Scenario 1 (2400 RPM): Choose a resistor for the highest of the three desired speeds, 2400 RPM in this example, which requires a 641-Ohm resistor (per the resistor tables). This will be referred to as R3. When the switch is in Position 3, the total resistance between PTO_VREF and PTO_RPM is R3 = 641 Ohms.
R3 = 641 Ohms.

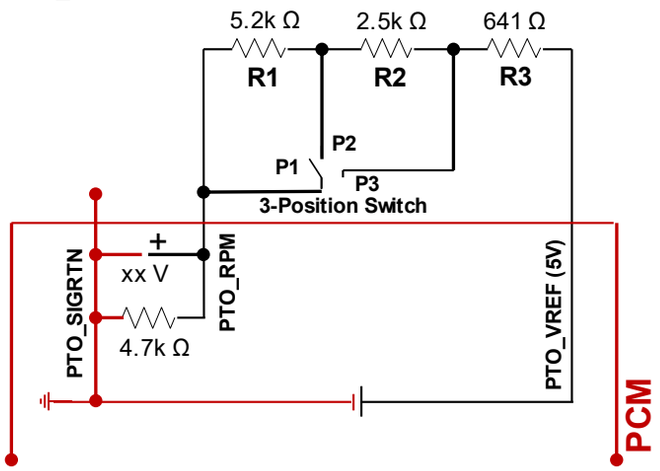
When the switch is in **Position 3**, the total resistance between PTO_VREF and PTO_RPM is R3 = 641 Ohms, resulting in 4.4 Volts between PTO_RPM and PTO_SIGRTN, resulting in 2400 RPM.
Note that in Position 3, the measured resistance across R1 and R2 is zero Ohms, thus the total resistance between PTO_VREF and PTO_RPM is R3.

Scenario 2 (1800 RPM): Choose a resistor for the middle speed, 1800 RPM in this case, which requires a total resistance between PTO_VREF and PTO_RPM of 3133 Ohms (per the resistor tables). So when the switch is in Position 2, the total resistance between PTO_VREF and PTO_RPM needs to be 3133 Ohms, which is the sum of R2 and R3.
Since R2 + R3 = 3133 Ohms,
R2 = 3133 Ohms – R3
R2 = 3133 Ohms - 641 Ohms
R2 = 2492 Ohms

When the switch is in **Position 2**, the total resistance between PTO_VREF and PTO_RPM is R3 + R2 = 3133 Ohms, resulting in 3.0 Volts between PTO_RPM and PTO_SIGRTN, resulting in 1805 RPM (~1800).
Note that in Position 2, the measured resistance across R1 is zero Ohms, thus the total resistance between PTO_VREF and PTO_RPM is the sum of R2 and R3.

Scenario 3 (1300 RPM): Choose a resistor for the lowest of the three speeds, 1300 RPM in this case, which requires a total resistance between PTO_VREF and PTO_RPM of 8356 Ohms (per the resistor tables). So when the switch is in Position 1, the total resistance between PTO_VREF and PTO_RPM needs to be 8356 Ohms, which is the sum of R1, R2 and R3.
Since R1 + R2 + R3 = 8356 Ohms,
R1 = 8356 Ohms – R2 – R3
R1 = 8356 Ohms - 2942 Ohms - 641 Ohms
R1 = 5223 Ohms

When the 3-position switch is in **Position 1**, the total resistance between PTO_VREF and PTO_RPM is 8356 Ohms, resulting in 1.8 Volts between PTO_RPM and PTO_SIGRTN, resulting in 1295 RPM (~1300).
Note that switch Position 1 is not connected to anything, where this allows for the total resistance between PTO_VREF and PTO_RPM to be the sum of R1, R2 and R3.



ALL SUPER-DUTY
SEIC / PTO INTERFACE – SPLIT-SHAFT MODE
6.7L DIESEL (ONLY)

Split-Shaft Mode (Diesel Only)

Split-Shaft Mode can be enabled by wiring in a resistive-circuit as shown in the SEIC Interface Schematics (see following pages). A resistor with the recommended value must be selected and wired into the circuit to achieve Target Engine RPM - refer to the Gas and Diesel Resistor Chart for resistor values. Split- Shaft mode requires nominal (12V dc) voltage to be applied to both PTO 1 and PTO 2 circuits.

Split Shaft Engagement Procedure

Ensure the following engine is running and the engine coolant temp is above 20 ° F.
Apply park brake.
Disconnect vehicle drive train (transmission in NEUTRAL, 4x4 DISENGAGED) and engage PTO load.
With foot off both the service brake and accelerator pedals, turn Split-Shaft PTO on.
Depress the service brake, and while pressing the service brake, shift transmission into DRIVE and continue pressing the service brake for a minimum of 3 seconds to allow the system to shift the transmission into 7 th gear, lock the torque converter, increase line pressure and elevate engine speed to a “stand -by” PTO speed (approximately650 RPM).
Release the service brake and engine speed will ramp up to the target engine speed in a controlled manner.*
See elsewhere in this BBLB for a complete list of PTO Enable / Disable conditions.

* If vehicle unexpectedly lurches or moves upon releasing service brake, immediately depress brake pedal and shift transmission into PARK or NEUTRAL to secure vehicle. Contact Upfitter immediately.

PTO Enable / Disable Conditions

Vehicle Conditions to Enable SEIC (all are required)	Vehicle Conditions that Disable SEIC (any one required) [1]	SEIC	Split-Shaft (Diesel Only) [3]	Mobil Mode
Parking brake applied	Parking brake disengaged	Yes	Yes	No
Foot off service brake	Service brake depressed	Yes	Yes [2]	No
Vehicle in PARK	Vehicle taken out of PARK	Yes	Yes [2]	No
Foot off accelerator pedal	Accelerator pedal depressed	Yes	Yes	No
Vehicle speed is 0 MPH (stationary)	Vehicle speed is not 0 MPH	Yes	Yes	No
Engine at a stable base idle speed	- -	Yes	Yes	No
Transmission oil temp. above 20° F	Transmission oil temperature exceeds 240° F (Diesel) or 250° F (Gas)	Yes	Yes	Yes
Engine coolant temp. at least 20° F (6.7L Diesel)	Engine coolant temperature exceeds 230° F	Yes	Yes	Yes
Engine coolant temp. at least 20° F (6.2L or 7.3L Gas)	Engine coolant temperature exceeds 230° F	Yes	N / A	Yes
- -	Catalyst temerature limit	Yes	Yes	Yes

Note 1: A “change-of-state” at the “PTO REQ1” input (for Stationary Elevated Idle Control non-Split-Shaft), or for both “PTO REQ1 and PTO REQ2” inputs (for Stationary Elevated Idle Control Split - Shaft) is required to re-invoke Stationary Elevated Idle Control. When a disable is seen by the PCM, the Stationary Elevated Idle Control function is de-activated, the “PTO RELAY” output circuit changes from a “ground-source” to “open-circuit” and engine speed returns to base idle. To reactivate Stationary Elevated Idle Control, the operator must open the PTO Switch to the “PTO REQ1” and “PTO REQ2” inputs, then close the PTO Switch again to the “PTO REQ1” or “PTO REQ1 and PTO REQ2” inputs.
Note 2: See Split-Shaft Mode description elsewhere in this BBLB.
Note 3: Brake pedal must remain depressed for a minimum of 3 seconds after moving gear shifter into DRIVE position in order to enable Split-Shaft Mode.

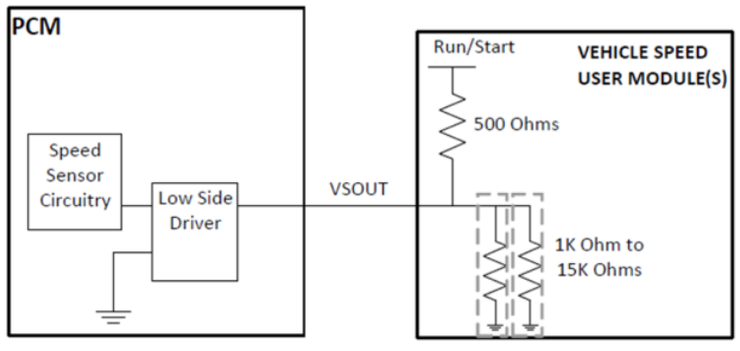


Illustration for Pin 12
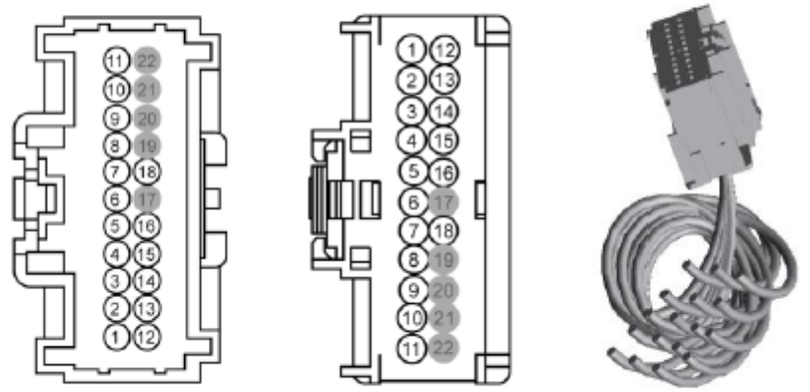
(see following page)

C213 SEIC / PTO Connector with Customer Access Circuits

All Super-Duty trucks include a blunt-cut pigtail harness with a male SEIC interface connector located under the side kick-panel in the passenger footwell. This pigtail is included on all F-series Super-Duty vehicles. Replacements may be ordered through Ford Parts.
Service Part #: HC3Z-14A303-C.



Female Connector (on vehicle-side harness) | Male Connector (on blunt-cut pigtail) | Blunt-cut Pigtail (with male connector)

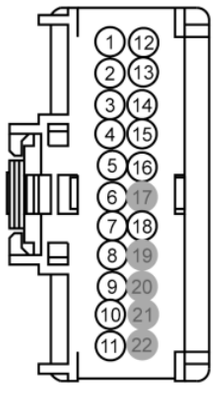
ALL SUPER-DUTY
PTO / CUSTOMER ACCESS CONNECTOR – BLUNT-CUT DESCRIPTIONS



Male Connector
(on blunt-cut pigtail)

Blunt-cut Pigtail
(with male connector)
HC3Z-14A303-C

Customer Access Blunt-cuts:

Pin	Signal	Wire Color	Gas BCM Pin	Diesel BCM Pin	Description
1	BRAKE FEED	YE / BU	C2280G-7		- For aftermarket Trailer-Brake Controller. - BCM fuse F4 (5-amp).
3	BLUNT CUT BCPIL	BN	C175B-17	C1232B-20	- A low-side driver, changing from "open circuit" to "ground" indicating that BCP is in effect. - Intended for powering an indicator lamp.
5	BLUNT CUT CTO	BU	C175B-77	C1232B-10	A digital output from the PCM that indicates a Clean Tachometer Output to provide an indication of engine RPM. The low-side driver in the PCM will switch the output off and on: "Off" will allow the output to be pulled up close to VPWR, and "On" will put the output to zero volts at a Frequency = ((Engine RPM x Number of Cylinders) / 120) with a duty cycle of 50%. The customer-supplied external controller should have a high-impedance input such that it does not impact the PCM's ability to provide a Clean Tach Out signal.
8	BLUNT CUT BCP SW	VT / BN	C175B-82	C1232B-21	- Applying vehicle battery voltage to this wire begins Battery Charge Protect (BCP). - BCP regulates engine speed between 600-1200 RPM to maintain required charge system voltage.
12	BLUNT CUT VS OUT	VT / OG	C175B-78	C1232B-5	An output from the PCM at a frequency of 2.22 times vehicle speed in MPH. The low-side driver in the PCM will switch the output OFF and ON. The OFF state of the low-side driver will result in an output that is pulled up close to RUN/START voltage. The ON state of the low-side driver will result in an output that is pulled close to ground. To properly reference this output, the customer-supplied external controller needs to incorporate a 500 Ohm pull-up resistor to RUN/START and a 1K to 15K Ohm pull-down resistor to ground. Using a 15K Ohm pull-down resistor will result in voltage signal that is closer to RUN/START voltage during the OFF state as compared to using a 1K Ohm pull-down resistor as this is a simple voltage divider in the OFF state where: Signal Voltage = (RUN/START voltage) x (pull-up resistor / pull-down resistor). See circuit illustration on previous page.
13	CUST_ACC_BC_TRO_N	GN / WH	C175E-59 *	C1232T-24	An output from the PCM that indicates when the Transmission Range Sensor is indicating that the transmission is in the Neutral position. The low-side driver (160 mA max) in the PCM will pull this output to ground when active (i.e. when trans selector is in Neutral position). To properly reference this output, the customer-supplied external controller needs to pull this output up to VPWR with a 680 Ohm resistor. Thus when the output is active, the voltage at this output will be zero volts. When this output is not active, the output will be pulled up to VPWR by the 680 Ohm resistor. * Signal not available on F250 with 6.2L engine and 6R100 transmission.
14	CUST_ACC_BC_TRO_P	GY / BN	C175E-19	C1232T-20	An output from the PCM that indicates when the Transmission Range Sensor is indicating that the transmission is in the Park position. The low-side driver (160 mA max) in the PCM will pull this output to ground when active (i.e. when trans selector is in the Park position). To properly reference this output, the customer-supplied external controller needs to pull this output up to VPWR with a 680 Ohm resistor. Thus when the output is active, the voltage at this output will be zero volts. When this output is not active, the output will be pulled up to VPWR by the 680 Ohm resistor.
15	BLUNT CUT PARK BRAKE SW	WH / VT	C2280E-47		Ground Output signal wire. NOTE: The Body Control Module (BCM) park brake input also uses this signal. The BCM park brake input cannot source any current. The body builder must provide a high-impedance circuit (such as a Field-Effect Transistor) with a 20 kΩ or larger resistor to prevent faulting the BCM. See schematic elsewhere in this BBLB.

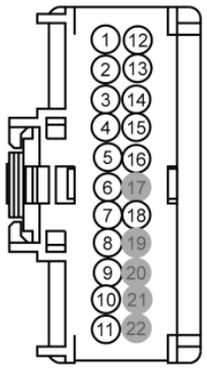
ALL SUPER-DUTY
PTO OPERATIONS – BLUNT-CUT DESCRIPTIONS



Male Connector
(on blunt-cut pigtail)

Blunt-cut Pigtail
(with male connector)
HC3Z-14A303-C

PTO Operation Blunt-cuts:

Pin	Signal	Wire Color	Gas BCM Pin	Diesel BCM Pin	Description
2	RUN-START (5A FUSED)	GN / OG	C2280C-23		12V, 5-amp fused feed intended for SEIC / PTO use.
4	BLUNT CUT PTO RLY	BU / WH	C175B-98	C1232B-11	- A low-side driver, changing from "open circuit" to "ground" indicating that the engine is ready for PTO operation to begin and that a PTO load may be applied. - Intended for powering a PTO indicator lamp, or tun on a relay coil (not to exceed 1-amp). An LED lamp requires addition of a resistor in-series.
6	CUST_ACC_BC_PTORT_D	GY / VT	- -	C1232B-22	A ground reference, buffered, used to complete the resistor circuit for engine speed selection.
7	BLUNT CUT PTO 1	YE / GN	C175B-84	C1232B-6	Applying vehicle battery voltage to this wire initiates SEIC **Stationary Mode** process. - Signals TorqShift™ transmission to enter SEIC Stationary Mode protocol. - Verifies safety enablers. - Turns off OBD and other emission-related monitoring. - Elevates engine speed to target found at PTO RPM circuit. - Invokes the PTO relay circuit when safety enablers are met. - Looks for the target engine speed requested at the PTO RPM Ciruit using a resistor or potentiometer.
9	BLUNT CUT PTO RPM	GN	C175B-85	C1232B-8	- Requires the addition of a resistor or potentiometer for any **SEIC / PTO** mode. - Resistor / potentiometer selection determines the fixed or variable engine target speed. - Combine in-circuit with DIESEL PTO REF and DIESEL PTO GND. - Speed range available: 900 to 3,000 RPM (700 RPM minimum for split-shaft operation).
10	CUST_ACC_BC_PTORF_D	WH / BN	- -	C1232B-55	- A 5-volt reference, buffered against shorts-to-ground or power. - Used to complete the resistor circuit for engine speed selection.
11	BLUNT CUT PTO 2	BU / OG	C175B-88	C1232B-4	Applying vehicle battery voltage to this wire initiates **Mobile PTO Mode**. - Signals TorqShift™ transmission to enter Mobile Mode protocol. - Verifies safety enablers. - Turns off OBD and other emission-related monitoring. - Invokes the PTO relay circuit when safety enablers are met. - Requires valid resistance on PTO RPM input for system to function.
16	GAS SIG RTN C	YE / VT	C175B-51	- -	A ground reference, buffered, used to complete the resistor circuit for engine speed selection.
17	--	--	--	--	--
18	BLUNT CUT PTO_VREF	YE / GN	C175B-52	- -	- A 5-volt reference, buffered against shorts to ground or power. - Used to complete the resistor circuit for engine speed selection.

ALL SUPER-DUTY
BATTERY CHARGE PROTECT
(BCP)

Battery Charge Protect (BCP)

This is a PCM feature, available on all Super-Duty vehicles, that helps maintain battery state-of-charge. When 12V is applied to the BCP SW circuit, the engine speed goes immediately to 600 RPM. From this state, the PCM references battery voltage and will raise engine speed as needed to help maintain battery charge.

- BCP CANNOT BE ACTIVE WHEN SEIC OR PTO MODES ARE ACTIVE.
- Max engine speed in BCP mode is 1200 rpm.
- Loss of an operating condition after BCP is engaged will require the BCP switch to be cycled before BCP will re-engage.
- A Resistor must be installed between DIESEL PTO REF (GAS PTO VREF for 7.3L) and PTO RPM for both Diesel and Gasoline engines.
- Auto Entry (6.7L Diesel only): The BCP and Mobile operation modes allow PTO to engage automatically once the engine started provided the input switch is left in the “on” position prior to starting the engine. However, loss of an operating condition after PTO is initially engaged will require the switch to be cycled before PTO will re-engage.
- Refer to sample wiring diagrams elsewhere in this BBLB.

Battery Charge Protect Typical Engagement Procedure

1. 12V applied to BCP SW circuit.
2. PCM looks for the following enabling conditions:
    - Parking brake applied.
    - Foot off of service brake.
    - Foot off of accelerator pedal.
    - Vehicle in PARK (or NEUTRAL).
    - Vehicle speed is 0 mph (stationary).
    - Engine at a stable base idle speed.
    - 6.7L only: Engine Coolant Temperature (ECT) 20° F minimum.
    - 6.2L & 7.3L only: Engine Coolant Temperature (ECT) 20° F minimum.
3. PCM looks for a valid voltage between 0.2 to 4.7 Volts on the PTO RPM circuit.
4. Vehicle idle fluctuates slightly as PCM enters BCP mode.
5. The BCPIL circuit changes from open-circuit to ground. This is intended to provide a ground path for a BCP indicator lamp.

NOTE: BCP is a smart system. Engine idle will not increase unless the vehicle senses an increase in electrical demand. Under periods of low electrical demand, the operator may not notice any change in engine RPM. It is recommend that the modifier install an indicator lamp to alert the operator that BCP is properly engaged.

Lights Controlled by Headlamp Switch

The headlamp switch used on the Super Duty F-Series vehicles is a switch that communicates with the Body Control Module (BCM) via a Local Interconnect Netw ork (LIN) connection to activate all exterior lighting. The Aux Lighting Module (BCM-B) w as removed for 2020. For halogen lamp vehicles, the left-hand and right-hand high- and low -beam headlamps are controlled individually by field-effect transistors (FETs) in the BCM. Both the upper and low er lamps are controlled by the BCM. For LED lamp vehicles, the left-hand and right-hand high- and low-beam headlamps are controlled individually by FETs in the BCM that interface with a module integrated in the headlamp assembly. Daytime Running Lamps (DRL) and park lamps are driven from the same circuit, so there is another LIN communication connection between the BCM and headlamps to control those individually. Lamp outage is controlled by a dedicated circuit betw een the lamp assemblies and the BCM. A connection to any circuit in the system controlled by the headlamp switch must be done using an auxiliary relay. Any connection must be performed on the lighting output of the BCM. Additional loads connected to the headlamp switch will damage the headlamp switch.

SUPER-DUTY PICKUP & CHASSIS CAB
TAIL-LAMP AND CHMSL CIRCUITS

TAIL LAMP LIGHT CONTROL CHANGES ON SUPER DUTY

2021MY Super Duty rear lighting is **now different** between Pickup's and Chassis Cab. Pickups and Pickup Box Delete units will have separate Stop and Turn lamp circuits.

NOTE: Chassis Cab units will still come with combined Stop and Turn lamps.

SEPARATING TAIL-LAMP STOP/TURN SIGNALS (CHASSIS CAB)

Some upfits require separate stop and turn signals. In these situations, the BCM must be reconfigured to change the stop/turn signal output to turn-only. The stop signal can then be provided from the Aftermarket CHMSL Access located at the end of frame (shown on page below). To reconfigure the BCM from STOP/TURN to TURN-ONLY, use the **FDRS** (Ford Diagnosis and Repair System) tool to access the settings:

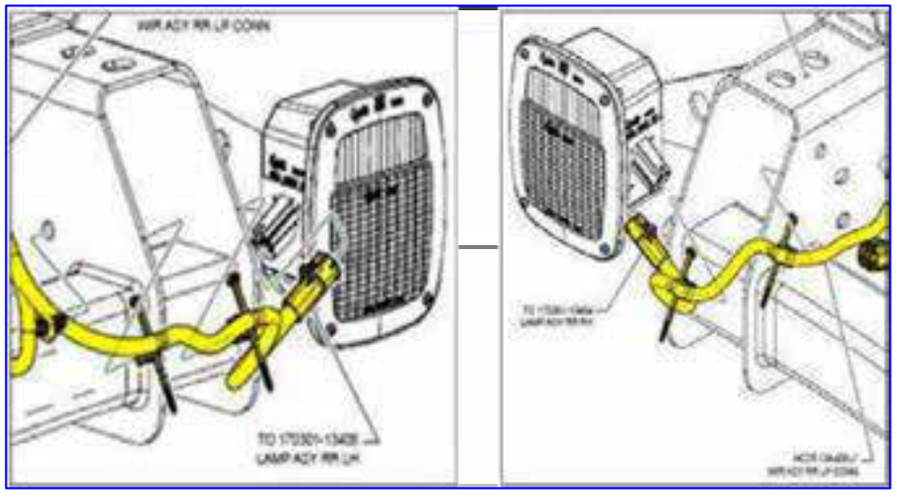
Choose Toolbox Tab> Select BCM under HS1 > Choose "BCM – Turn Signal lamp Combination" and run selection > Select "Tail Lamps" in Programmable Parameters Categories > Select Tail Lamp Configuration (Reference STEP 10 in the following slides) > Select LED STOP AND POSITION LAMPS

CONVERT TAIL-LAMPS FROM INCANDESCENT TO LED (ALL SUPER-DUTY)

The rear lamps may be configured for use with either Halogen/Incandescent or LED turn signals by means of reconfiguring the BCM. Use a **FDRS** (Ford Diagnosis and Repair System) tool to access the settings:

Choose Toolbox Tab> Select BCM under HS1 > Choose "BCM – Turn Signal lamp Combination" and run selection > Select "Tail Lamps" in Programmable Parameters Categories > Select Tail Lamp Configuration (Reference STEP 10 in the following slides) > Select LED TURN LAMPS

The "Incandescent" setting utilizes PWM (Pulse-Width Modulation) in the tail-lamp circuit, while the "LED" setting utilizes direct-current. The turn-only signal can be accessed at the tail-lamp.



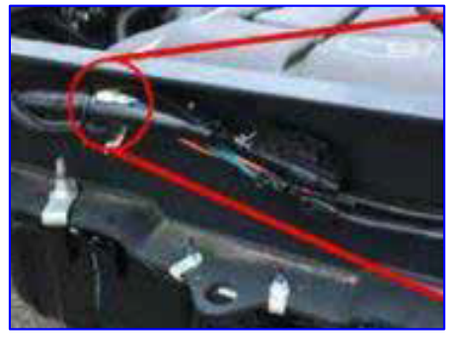
Each turn signal circuit is powered through the BCM and is Field-Effect Transistor (FET) protected. Do not exceed a lamp load of 2.9 Amps or BCM damage could result.

CLS27 (GN/VT) in Cavity 4, RH Lamp	 F3LB-14A624-GB
CLS23 (GY/BN) in Cavity 4, LH Lamp	

CHMSL ACCESS FOR BRAKE LIGHT FUNCTION OR ADDED UPFITTER CHMSL (ALL SUPER-DUTY)

A CHMSL feed is provided at the end of the frame on all Super-Duty trucks on the left-hand side. This is in addition to the feed provided as part of the Customer Access Circuits located in the vehicle cab behind the passenger-side kick panel. These are 5-amp fuse-protected feeds.

Wire Color	Circuit No.	Circuit Intent	Description
YE/BU	CBP04	Service Brake Signal Output	**6.7L Diesel, 6.2L / 7.3L Gas: BCM Pin C2280G-7**
			Intended for upfitter added CHMSL. BCM fuse F4,5 Amp-Blunt cut tapes to harness at rear of frame on Left hand side



BU	Trailer-Brake Control Module Output
GY / BN	Back-up Lamps
BU / GY	Ground
VI	High-mount Stop Lamp
YE	Left-hand Stop / Turn
GN	Right-hand Stop / Turn
OG	Battery Charge
BN	Park Lamps

COMBINING TAIL-LAMP STOP AND TURN SIGNALS (PICKUP BOX)

2021MY Super Duty Pickup units will have **SEPARATE** Stop and Turn lamps. For upfits built off a Pickup that require a combined stop/turn signals it is recommended to use the Ford Pick-up Box Delete Wiring Harness (Part Number LC3Z-13A409-J). The Turn Signal circuit (from the Separate Tail Lamp config - Circuit CLS23 LH Lamp and CLS27 RH Lamp) will be used as the combined STOP/TURN and require the BCM to be reconfigured. To reconfigure the BCM from separate stop and turn to combined Stop/Turn, use a **FDRS** (Ford Diagnosis and Repair System) tool to access the settings:

Choose Toolbox Tab> Select BCM under HS1 > Choose "BCM – Turn Signal lamp Combination" and run selection > Select "Tail Lamps" in Programmable Parameters Categories > Select Tail Lamp Configuration (Reference STEP 10 in the following slides) > Select INTEGRATED LED STOP AND TURN LAMPS

CLS27 (GN/VT) in Cavity 4, RH Lamp	 F3LB-14A624-GB

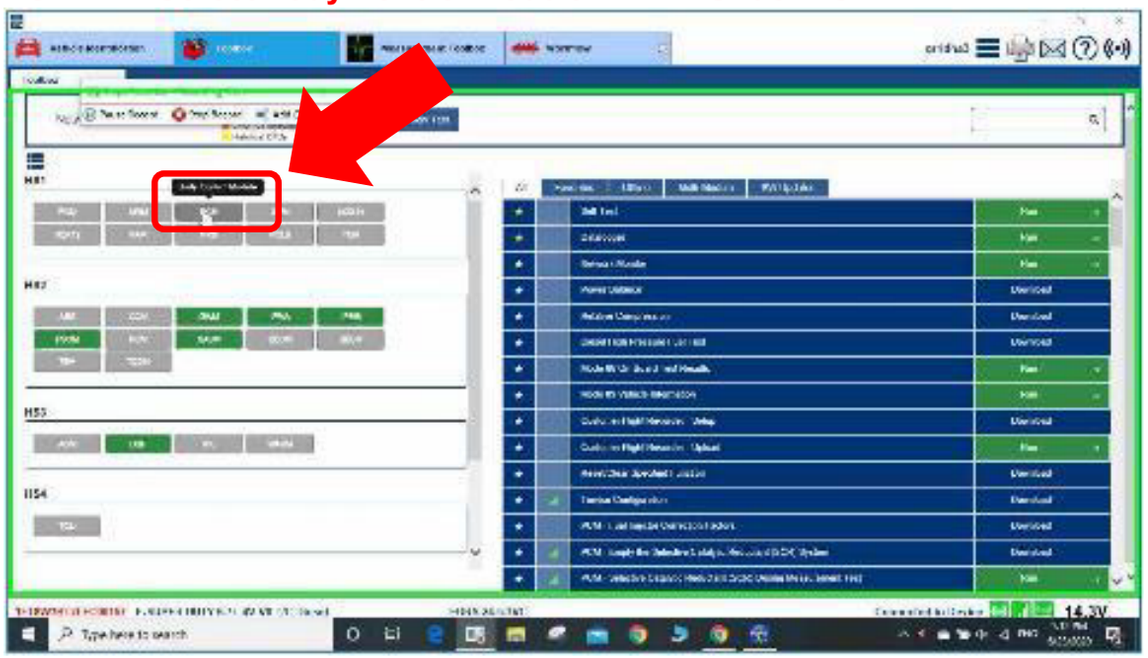
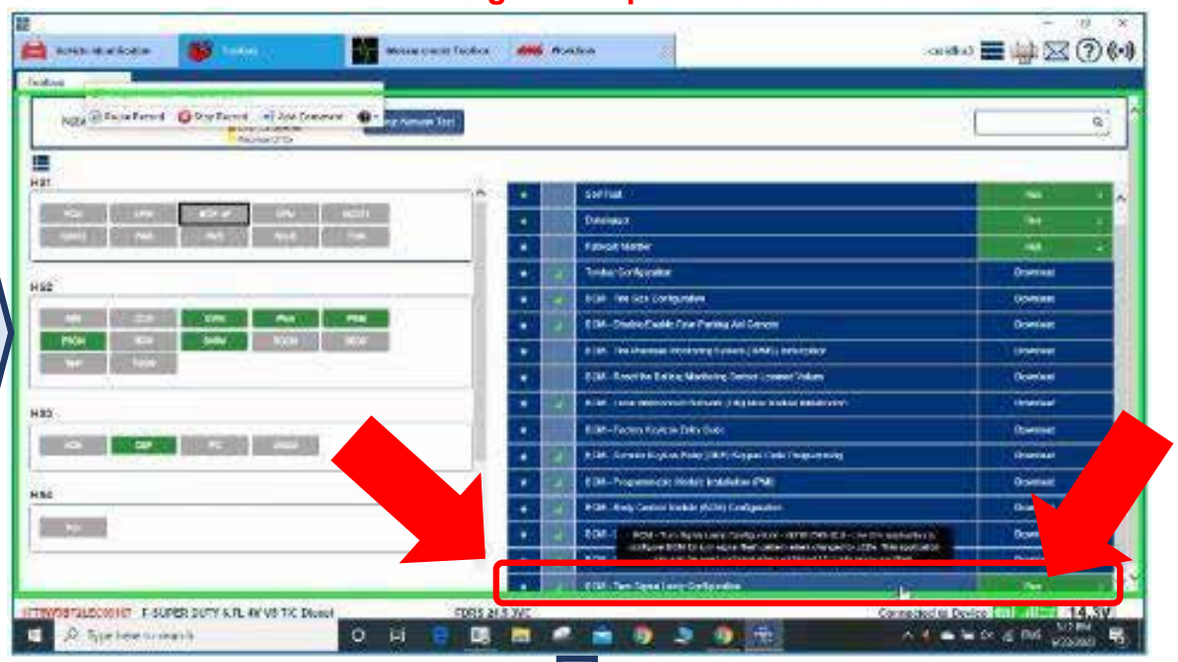
SUPER-DUTY PICKUP & CHASSIS CAB
TAIL-LAMP AND CHMSL CIRCUITS (Cont'd)

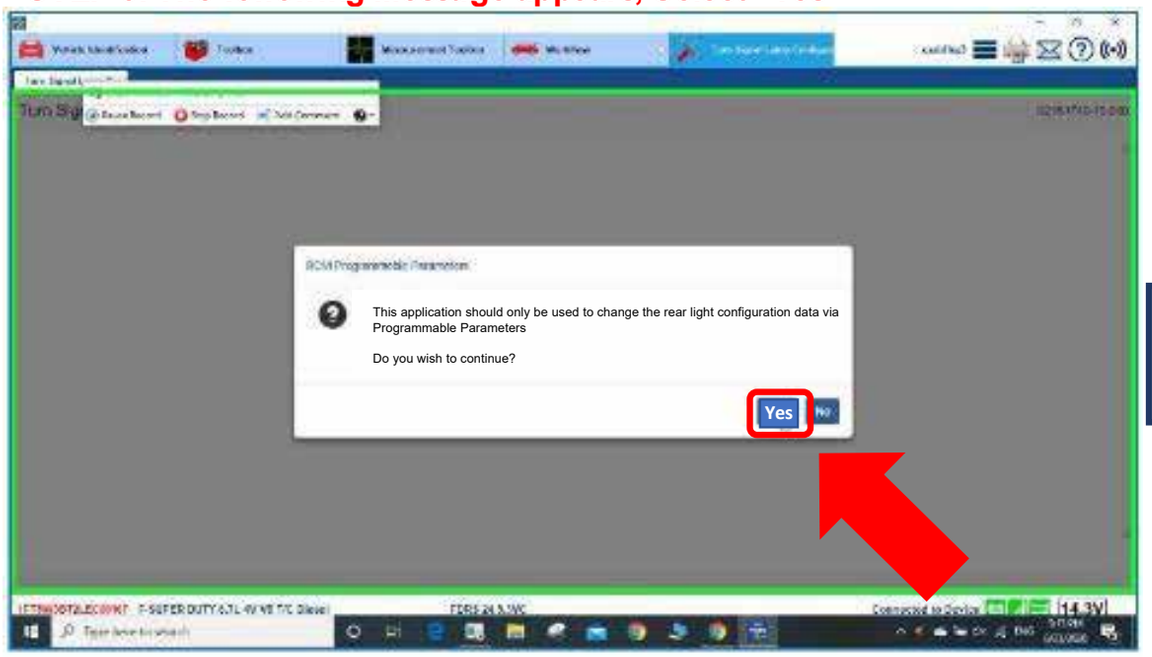
STEP 1: Select Body Control module "BCM" Under HS1



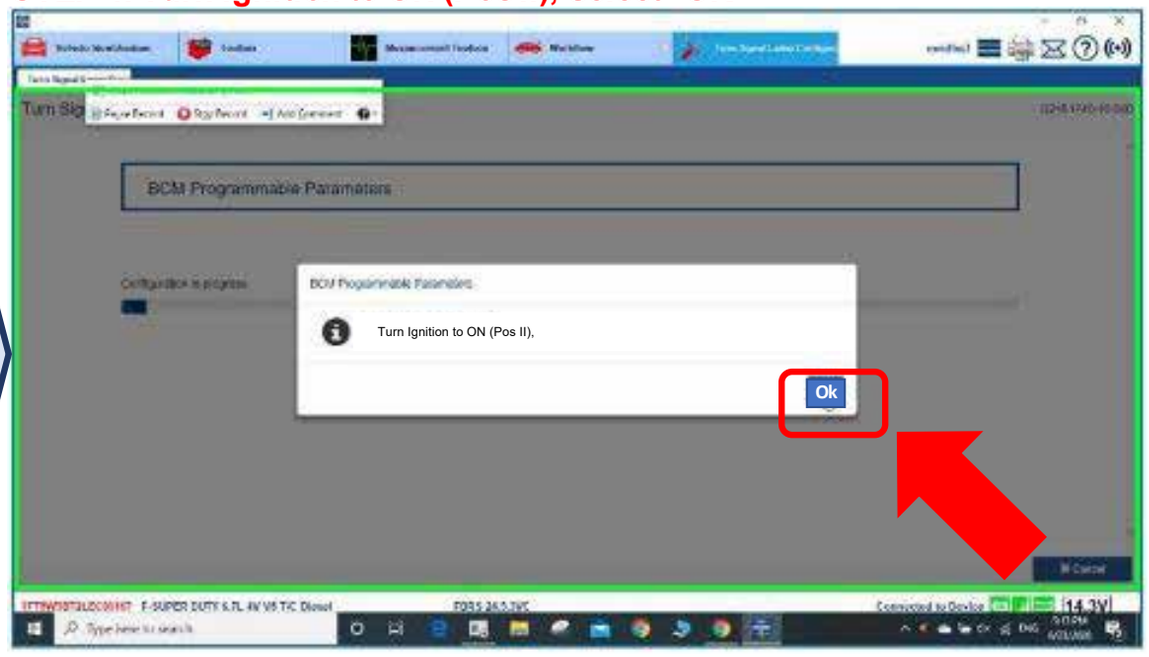
STEP 2: Select "BCM – Turn Signal Lamp Combination" & Select "Run"



STEP 3: The following Message appears, Select "Yes"

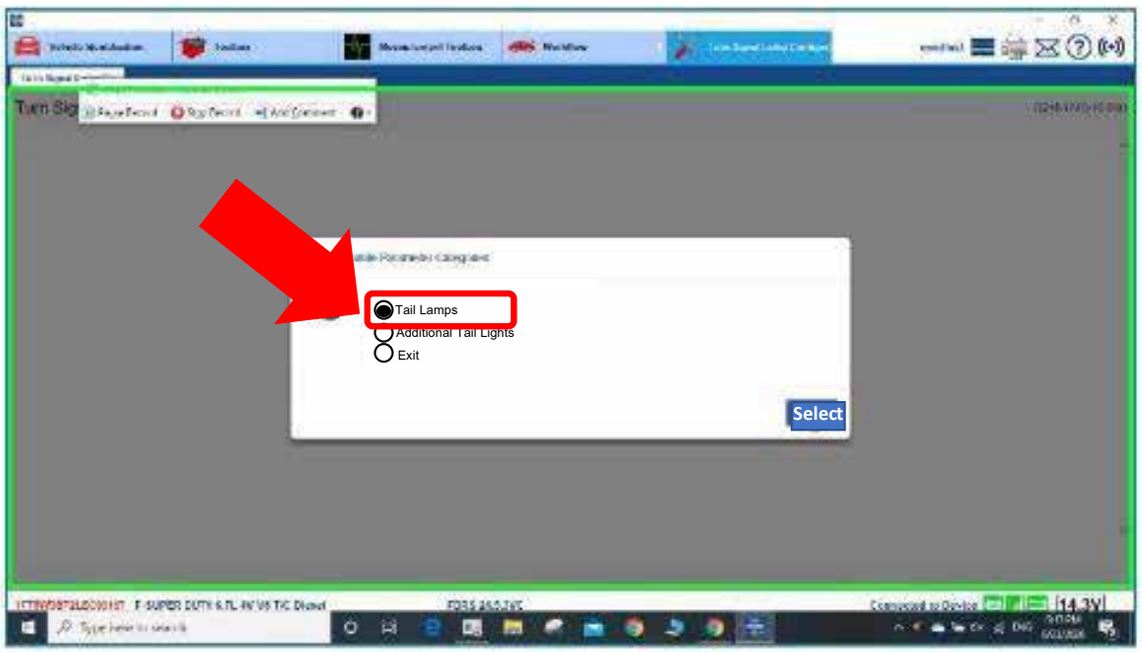


STEP 4: Turn Ignition to ON (Pos II), Select "OK"

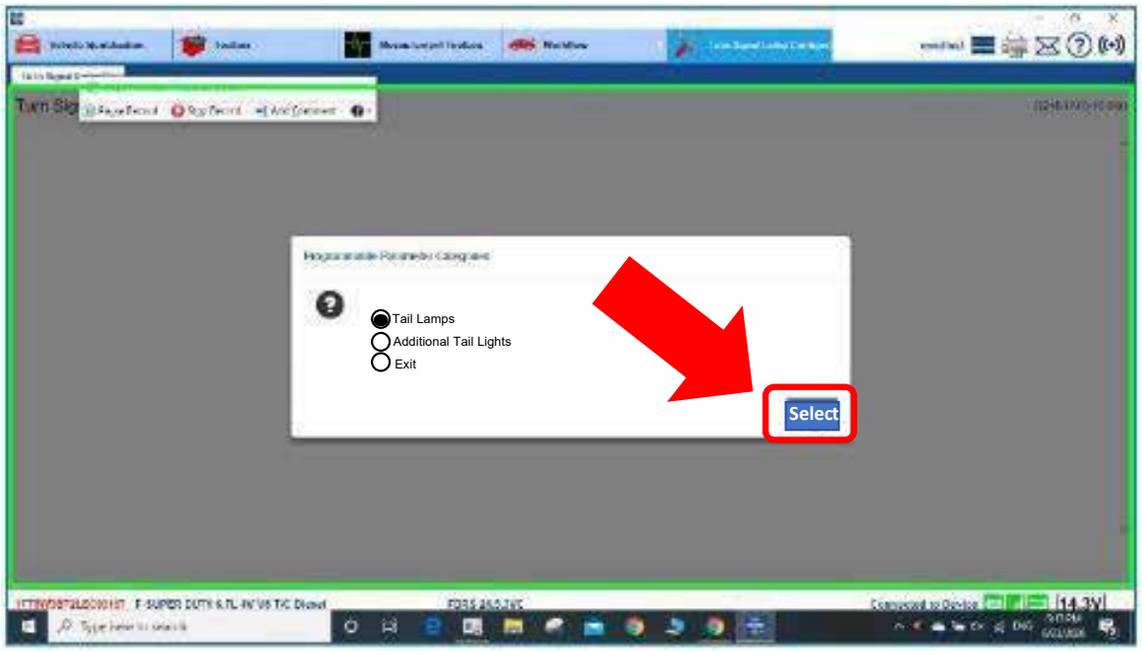


SUPER-DUTY PICKUP & CHASSIS CAB
TAIL-LAMP AND CHMSL CIRCUITS (Cont'd)

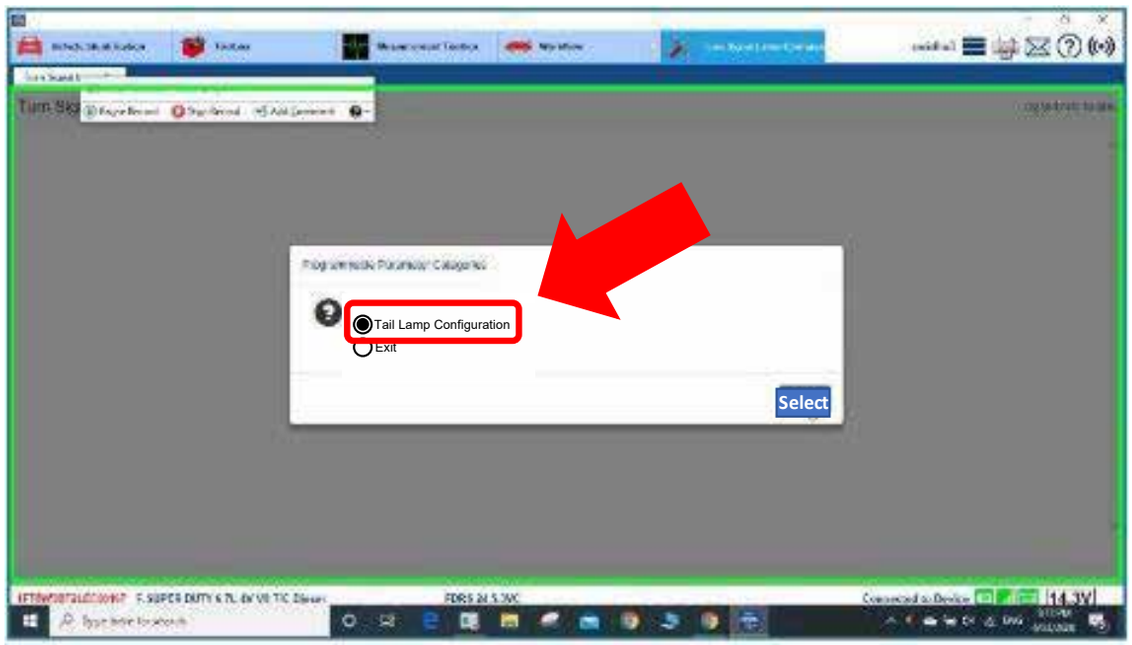
STEP 5: Select "Tail Lamps"



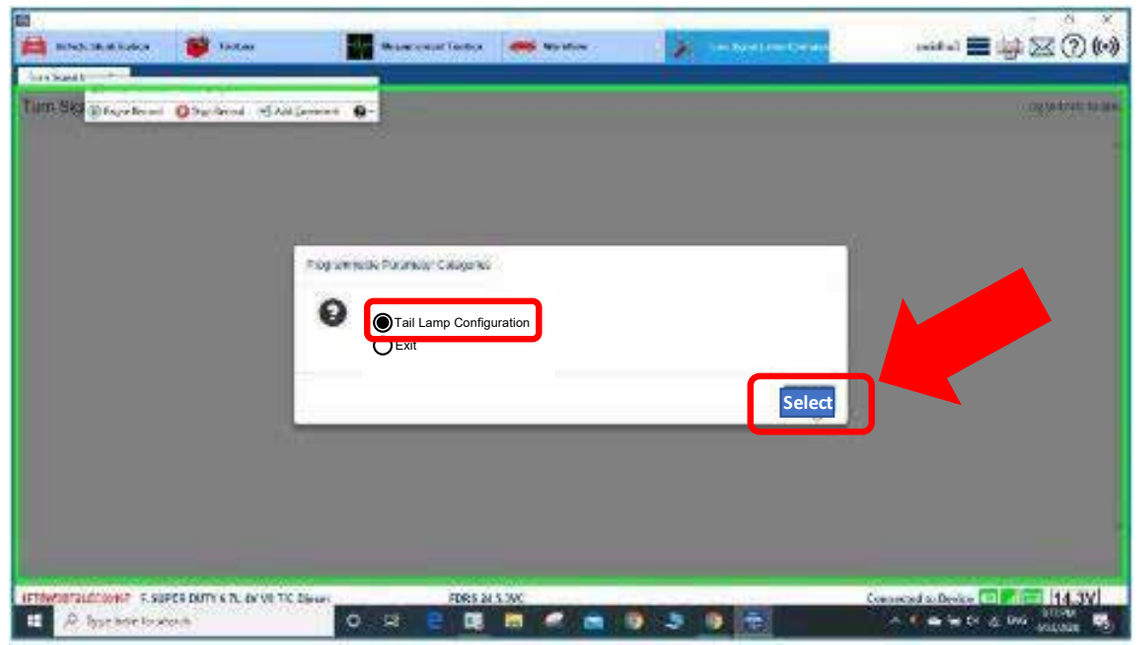
STEP 6: Click on "Select"



STEP 7: Select "Tail Lamp Configuration"

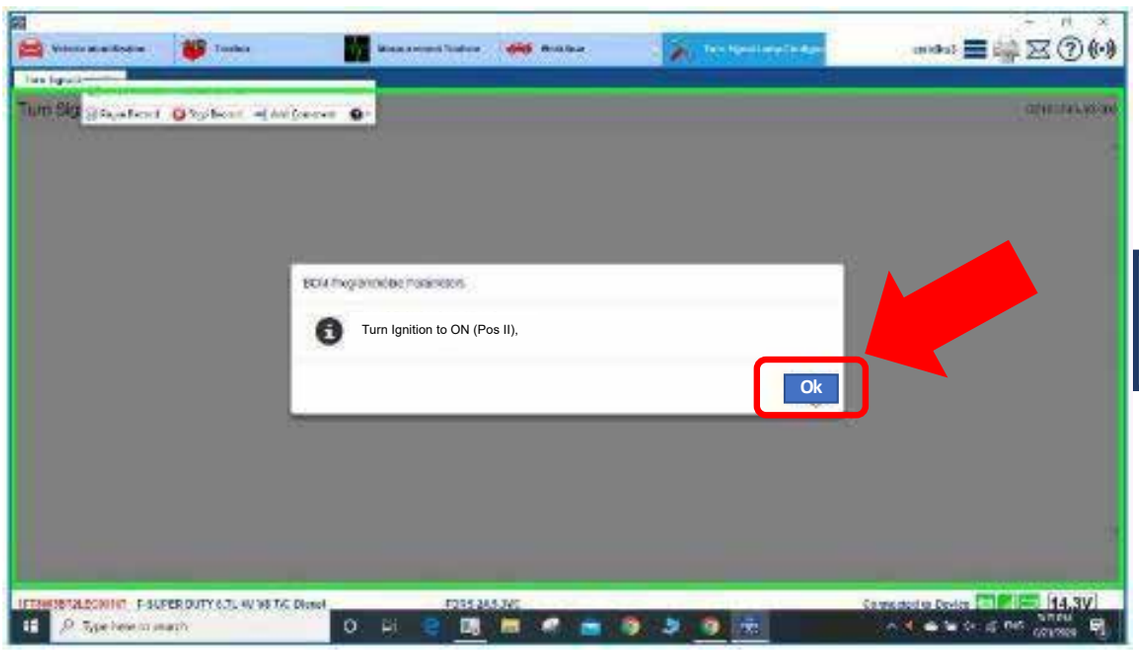


STEP 8: Click on "Select"

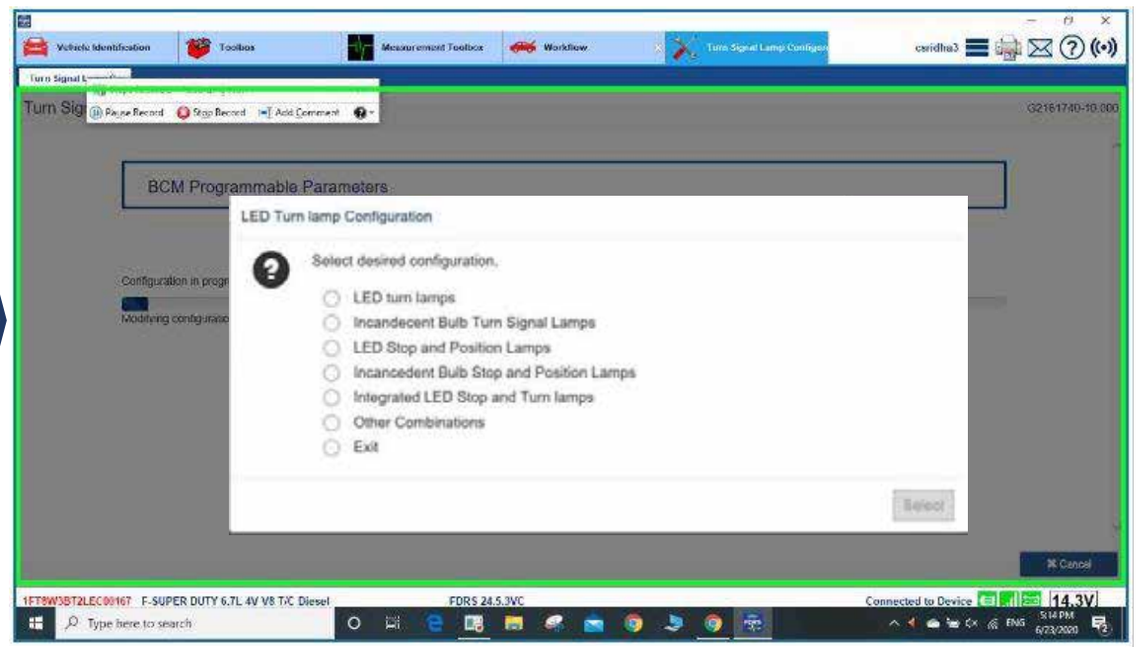


SUPER-DUTY PICKUP & CHASSIS CAB
TAIL-LAMP AND CHMSL CIRCUITS (Cont'd)

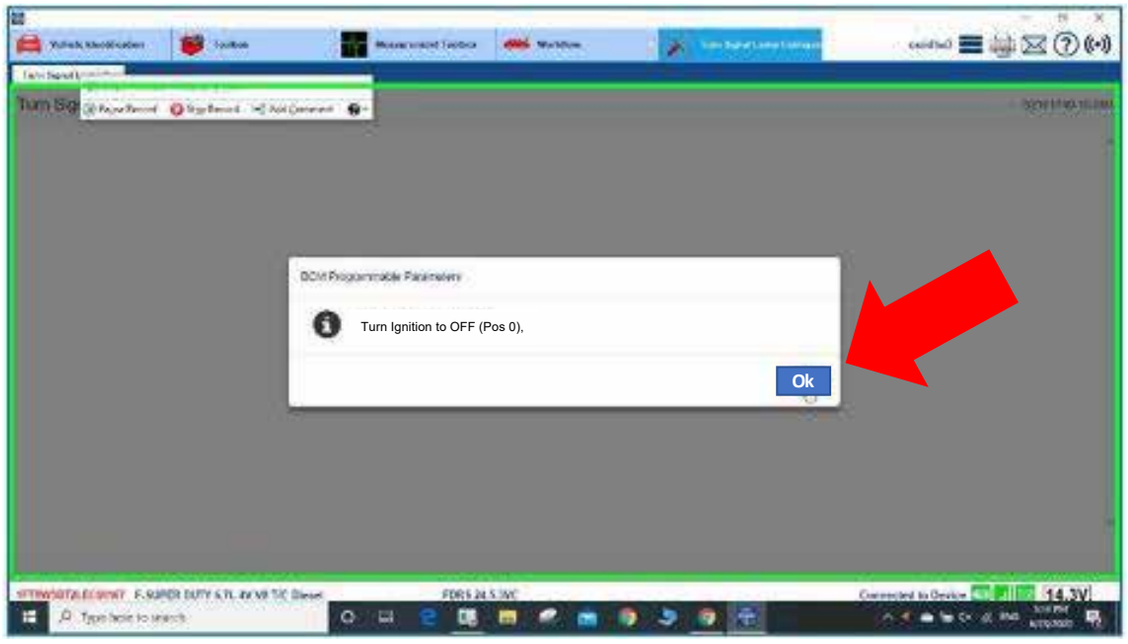
STEP 9: Turn Ignition ON (Pos II), Select "OK"



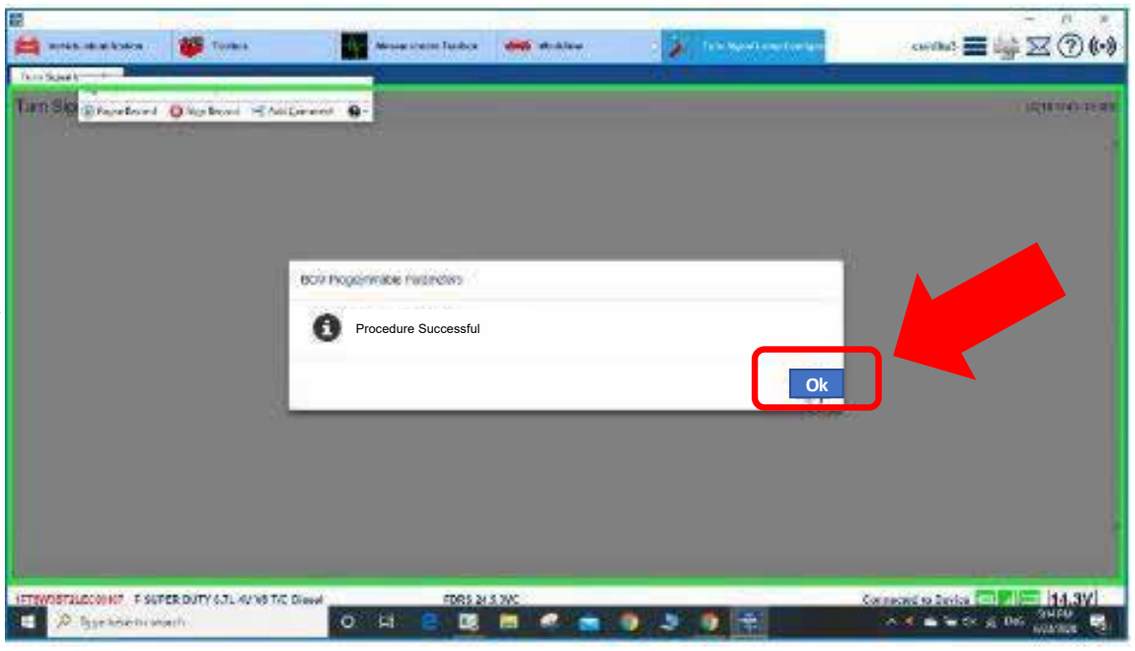
STEP 10: Select An Option Depending On The Specific Application



STEP 11: Turn Ignition to OFF (Pos 0), Click on "OK"



STEP 12: Confirmation Procedure Successful, Click on "OK"



Body Builders Layout Book

ALL SUPER-DUTY
TRAILER-TOW
CIRCUITS

Trucks with a Ford Trailer Brake Controller

All 2017 F-Super Duty vehicles equipped with a factory Trailer Brake Controller (TBC) utilize a Trailer Module (TRM) which initiates the trailer charging system. For trailer charging to operate, the TRM must detect a connected trailer and a brake pedal input before charging will be present at the trailer connector. Adding the trailer battery charge relay and fuse into the battery junction box are not required to operate trailer charging with a TRM.

Trucks not equipped with Ford Trailer Brake Controller

A service kit (**HC3Z-19H332-A**) is available for upfitters wishing to install the Ford Trailer Brake Controller on a vehicle that was not equipped with one from factory. The vehicle must be equipped with either Trailer Tow Package (option code 531)or Max Trailer Tow Package (option code 535) for the kit to be functional.

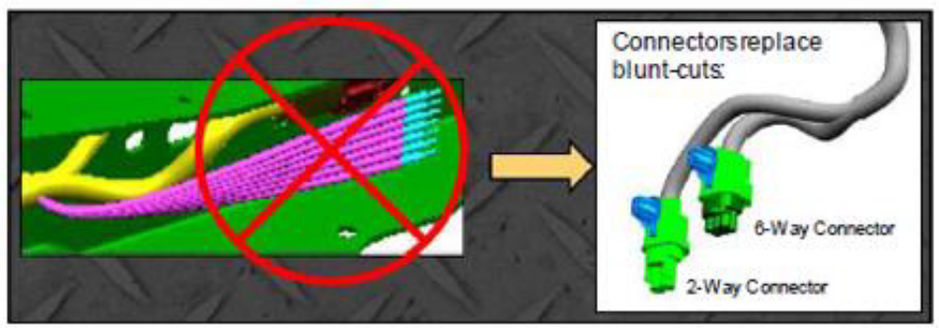
Upfitters Installing Additional Body Lighting

The trailer relays are controlled through BCM outputs. The trailer circuits have the following fuse ratings:

Reverse Lamps: 10A
Stop / turn signals: 30A (combined left and right)
Trailer Battery Charge: 30A (only available with trailer brake controller service kit installed).

Aft Harness Connectors (Chassis Cab)

All Super-Duty harness now come with standard connectors (in lieu of blunt-cut wires) on the body trailer-tow harness at the aft end of the frame.



Service Part # FU5Z-14489-A
4/7-way Trailer-tow Connector

Service Part # LC3Z-13A576-A
5-ft Jumper Harness
(Compatible with added trailer-tow connectors)

Aft Harness Mating Connectors (Chassis Cab)

For utilization of the body harness connectors to power the lighting on an upfit body, see the mating part and pinout information below. All supplier parts are Yazaki.

ALL SUPER-DUTY
UNDERHOOD ELECTRICAL EQUIPMENT MOUNTING

Electrical equipment added to the engine compartment during any aftermarket installations/modifications must be positioned to prevent any B+ power from coming into contact with the underside of the hood when closed. All B+ related equipment must be placed/routed per these recommendation, adequately retained, shielded/covered, and confirmed to have clearance to the hood when closed to prevent unintended battery short-to-ground or damage to vehicle wiring (e.g. radio antenna and radio harness within the instrument panel).

Do not mount or place electrical equipment, including but not limited to connection terminals, cables, relays, fuses, and fusable links, on top of or near the primary or secondary battery in a location that has low clearance to the underside of the hood as indicated by orange rectangles in the figures that follow.

The reduced clearance to the underside of the hood for added electrical equipment on top of or near the primary or secondary battery may not be apparent when the hood is open.

If any B+ equipment is mounted in the low clearance zone as indicated by the diagram, a minimum of 15mm must be confirmed between bottom of hood and any equipment (including any B+ shielding and underhood insulation) mounted in the engine compartment when hood is fully closed. Several methods exist to confirm equipment and shielding meets minimum clearance to bottom of hood (e.g. clay test, borescope). The upfitter must ensure that any electrical equipment or shielding mounted underhood does not come into contact with the hood or hood components.

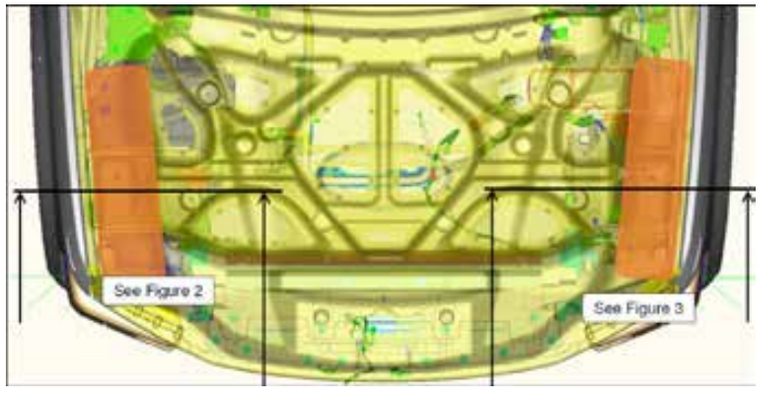

Figure 1: Underhood View
Low clearances to underside of hood are highlighted in orange.

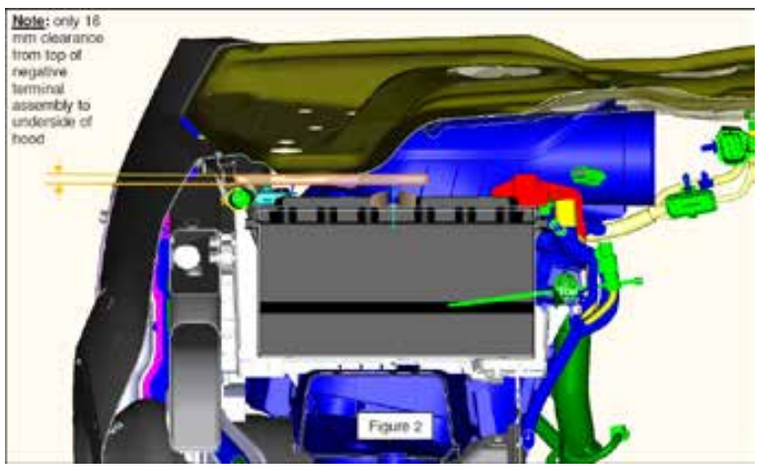

Figure 2: Section View at RH Battery

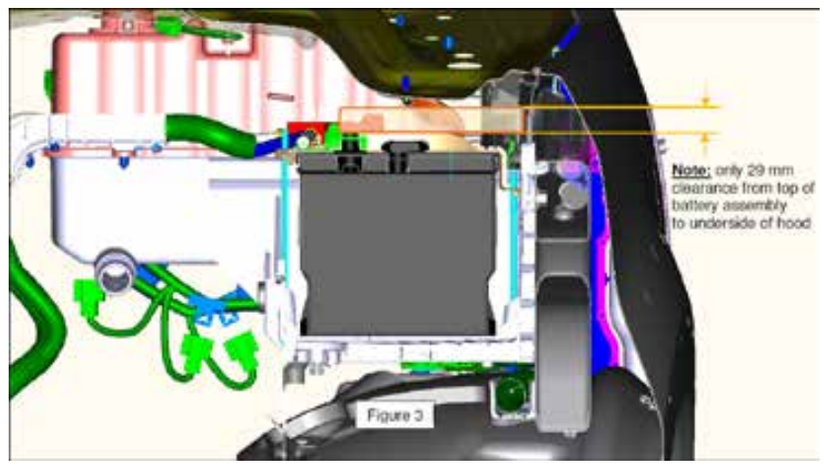

Figure 3: Section View at LH Battery

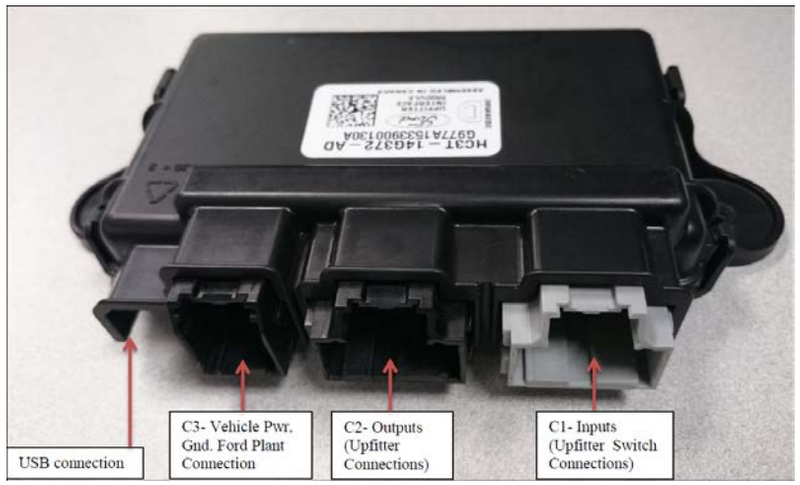
Body Builders Layout Book

ALL SUPER-DUTY
UPFITTER INTERFACE MODULE (UIM)

The UPFITTER INTERFACE MODULE (UIM) is an electronic control module that provides read-access to numerous vehicle CAN messages, as well as up to 10 upfitter-wired signal inputs, for the purpose of programming output signals to control aftermarket equipment (such as lift buckets, cranes, motors, salt spreaders, snow plows, etc.). Programming software and usage manuals are available at https://www.fleet.ford.com/partsandservice/upfitter-interface/ .

For more detailed info on the UIM,
refer to the General Body Builders Layout Book
available at www.fordbbas.com/publications.

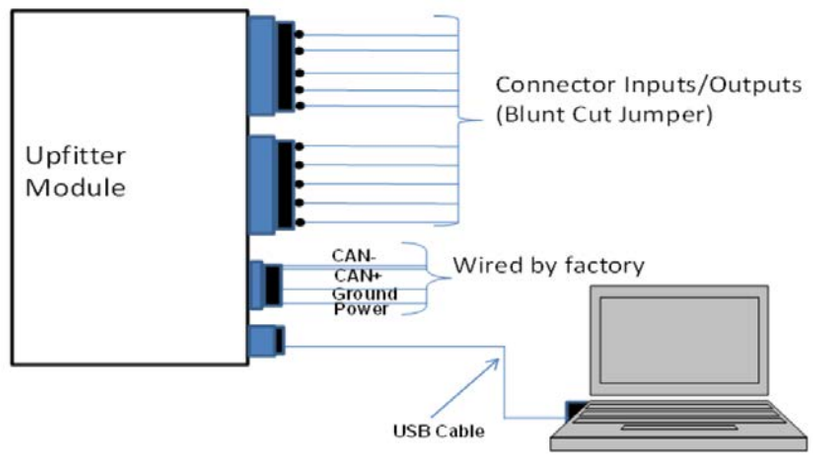
The UIM Gen1 is available on all Super-Duty Chassis Cabs and Pickups MY2017 and newer (Order Code 18A), and is located under the kick-panel trim in the front passenger (RH) footwell. If your MY2017+ Super-Duty was not originally built with the UIM option, it can easily be retrofitted by ordering and installing the UIM module and its harness. The Module and the Harness must both be ordered for retrofits. See part numbers below.



Service Part Number: HC3Z-14G372-B
Upfitter Interface Module (GEN1)

Service Part Number: LC3Z-14A303-B
UIM Harness

NOTE: Check with Ford Dealer for latest part levels.



UIM Location (Super-Duty)

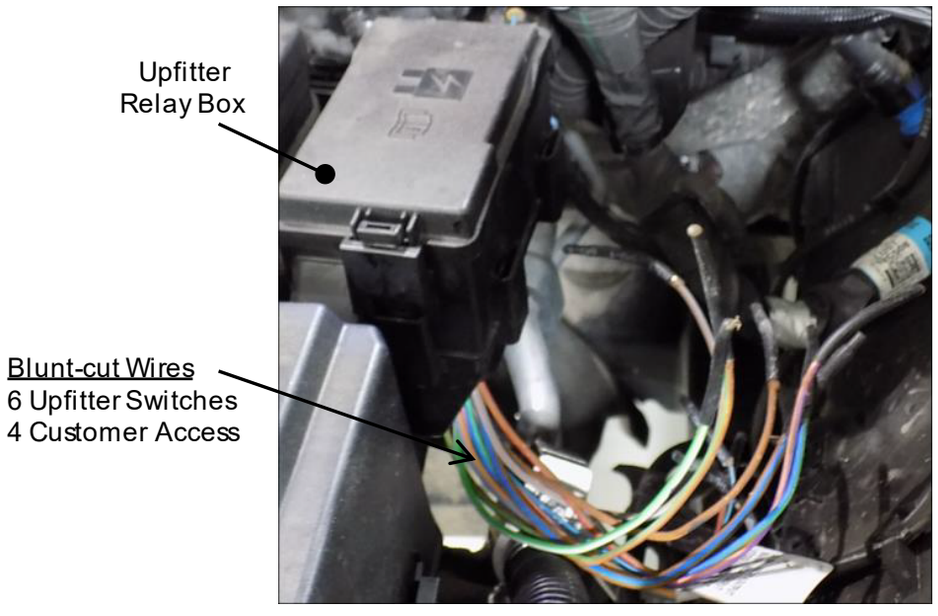
The Upfitter Relay Box, located underhood on the passenger side, contains relays that are controlled by the Upfitter Switches in the cab overhead console. See the separate section of this BBLB for more info on the Upfitter Switches.

There are six blunt-cut wires, correlating to the 6 Upfitter Switches, extending out from the bottom of the Upfitter Relay Box, which upfitters may use to route switch signals to their installed equipment as desired.

Six Upfitter Switch Blunt-cuts (located underhood below Upfitter Relay Box):

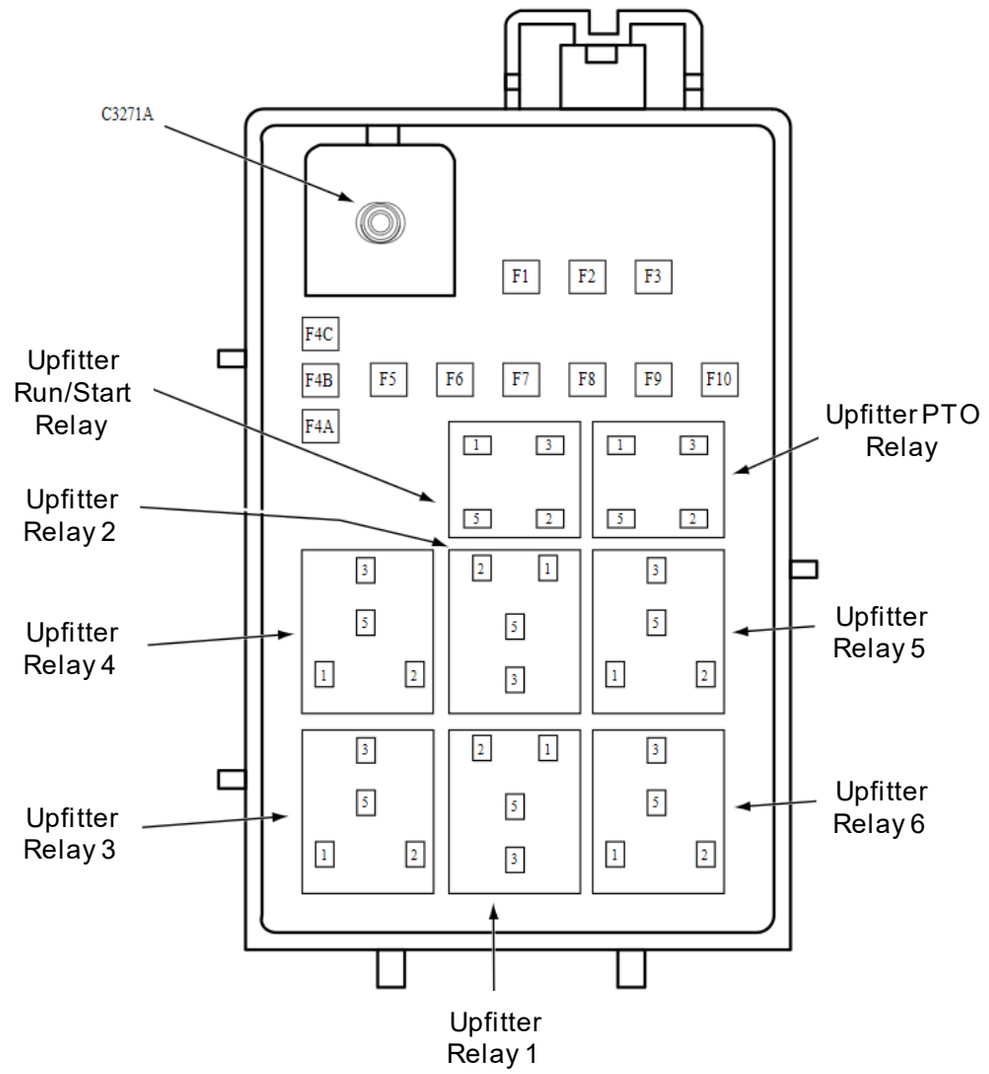
Upfitter Switch	Fuse #	Wire Color	Circuit	Rating	Configuration
Aux 1	F10	BN / GN	CB117	25A	Ignition Hot Only
Aux 2	F9	VT / OG	CB114	25A	Ignition Hot Only
Aux 3	F8	BU / BN	CB116	25A	Ignition Hot Only
Aux 4	F7	GY / BN	CB113	25A	Ignition Hot Only
Aux 5	F1	BN / BU	CB115	40A	Ignition Hot or Hot-at-all-times
Aux 6	F2	GY / OG	CB118	40A	Ignition Hot or Hot-at-all-times

In addition to the 6 Upfitter Switch blunt-cut wires described above, this harness bundle also contains 4 customer-access blunt-cut circuits. See table below.



Engine Bay – Passenger Side

Upfitter Relay Box Illustration



Four Customer-Access Blunt-cuts (located underhood below Upfitter Relay Box):

Description	Wire Color	Circuit	Fuse #	Rating
Run / Start Output	BN	CB111	F3	20A
